

LIN ENGINEERING

The Step Motor Specialists

Proven Application Support, Performance and Quality

WHY LIN?

Over the past decade, Lin Engineering has gained a tremendous amount of market share and earned a reputation as the **"Leader in Step Motor Technology."**

Why are more and more engineers choosing Lin Engineering?

Versatile Product Lines

High Torque and Extreme Torque stepper motors that will help you avoid stalling and skipping steps.

Get high accuracy, low resonance, and quiet performance from these stepper motors.

Stepper motors specifically designed to weather extreme environments like high/low temperatures, clean rooms, dust and water.

Small stepper motors perfect for applications with compact space and size constraints.

Proven Application Support, Performance and Quality

Unrivaled Application Support

- 98% application success rate
- 95% of prototypes shipped in less than 1 week

High Performance

- Highest torque output
- High accuracy = no skipping steps
- Reduced vibration and resonance
- Versatile Product Lines to accommodate many applications

Reliable Quality

- Consistent Performance
- 4.5 Sigma System
- ISO 9001 Certified
- Continuous Improvement

Growing Market Share

Customers in 2005

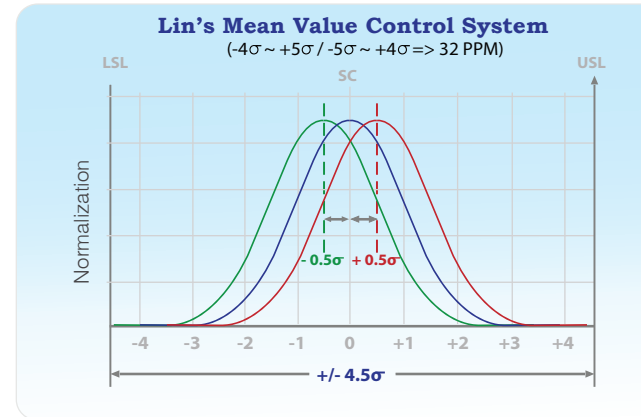

Customers in 2015

RELIABLE QUALITY

Lin Engineering has a reputation for high quality products for good reason; our quality policy is **"Continuous Improvement"** utilizing the 4.5 Sigma Way.

Why does our quality consistently out perform the competition?

4.5 Sigma From Lin Engineering - a True Quality System

We've implemented 4.5 Sigma in order to accomplish the following goals:

- Establish a robust Mean Value Control System
- Perform incoming inspection at our supplier's site
- Ensure quality products with every shipment

Our Certifications

Small Business Administration
 Lin Engineering has been certified as a Small Disadvantaged Business under the U.S. Small Business Administration (SBA) guidelines

ISO 9001
 The Certification Body of TUV America Inc. has certified that Lin Engineering has implemented a Quality Management System in Accordance with ISO 9001:2000.

UL
 At Lin Engineering, safety is our mission, and product safety testing and certification is one way we deliver that mission every day.

ITAR
 Lin Engineering has been ITAR registered since 2010; over the years we have worked with a number of different customers on ITAR projects and have built a proven system to ensure success.

RoHS Compliant
 Lin Engineering is committed to offering products compliant with the EU RoHS directive.

CE Declaration
 Lin Engineering assures that our motors meet the following European Norm Standards:
 ■ EN55014-1: 2007
 ■ EN60034-1.5.11

REACH
 Lin Engineering is a supplier of products that do not "intentionally release" chemicals, and therefore we are not bound by the REACH regulation regarding chemical registration.

OUR LINE OF STEPPER MOTORS

Lin Engineering Stepper Motors are designed to help solve the most common motion control issues.

- ✓ Torque (i.e. stalling, missed steps, etc.)
- ✓ Noise
- ✓ Vibration/Resonance
- ✓ Accuracy & Repeatability
- ✓ Heat Generation
- ✓ Outlasting Environmental Elements

Read on to Discover Your Solution

Stepper motors specifically designed to weather extreme environments like high/low temperatures, clean rooms, dust, and water.

IP65 RATED MOTORS

NEMA 17 | 1.8° Step Angle

4118
HOLDING TORQUE
Up to 125 oz-in
(0.88 N-m)

IPX7 RATED MOTORS

NEMA 17 | 1.8° Step Angle

4118
HOLDING TORQUE
Up to 125 oz-in
(0.88 N-m)

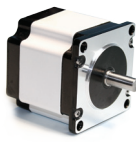

VACUUM RATED MOTORS

NEMA 11 | 1.8° Step Angle

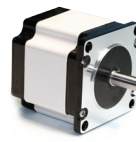

211
HOLDING TORQUE
Up to 16.6 oz-in
(0.12 N-m)

NEMA 23 | 1.8° Step Angle

5718
HOLDING TORQUE
Up to 294 oz-in
(2.08 N-m)

NEMA 23 | 1.8° Step Angle

5718
HOLDING TORQUE
Up to 294 oz-in
(2.08 N-m)

NEMA 17 | 1.8° Step Angle

4118
HOLDING TORQUE
Up to 125 oz-in
(0.88 N-m)

NEMA 34 | 1.8° Step Angle

8718
HOLDING TORQUE
Up to 1288 oz-in
(9.10 N-m)

NEMA 34 | 1.8° Step Angle

8718
HOLDING TORQUE
Up to 1288 oz-in
(9.10 N-m)

NEMA 23 | 1.8° Step Angle

5718
HOLDING TORQUE
Up to 294 oz-in
(2.08 N-m)

HIGH TEMP MOTORS

These motors are designed to withstand ambient temperatures of up to 110° C

Small stepper motors perfect for applications with compact space and size constraints.

COMPACT MOTORS

NEMA 8 | 1.8° Step Angle

208
HOLDING TORQUE
Up to 4.0 oz-in
(0.03 N-m)

NEMA 14 | 0.9° Step Angle

3709
With *Signature Series* TECHNOLOGY
HOLDING TORQUE
Up to 16 oz-in
(0.11 N-m)

NEMA 11 | 1.8° Step Angle

211
HOLDING TORQUE
Up to 16.6 oz-in
(0.12 N-m)

NEMA 17 | 0.9° Step Angle

4109
With *Signature Series* TECHNOLOGY
HOLDING TORQUE
Up to 22 oz-in
(0.16 N-m)

High Torque and Extreme Torque stepper motors that will help you avoid stalling and skipping steps.

HIGH TORQUE

NEMA 17 | 1.8° Step Angle

4018

HOLDING TORQUE
Up to 42 oz-in
(0.30 N-m)

4118

HOLDING TORQUE
Up to 125 oz-in
(0.89 N-m)

NEMA 23 | 1.8° Step Angle

5618

HOLDING TORQUE
Up to 175 oz-in
(1.24 N-m)

5718

HOLDING TORQUE
Up to 305 oz-in
(2.16 N-m)

5818

HOLDING TORQUE
Up to 294 oz-in
(2.08 N-m)

NEMA 34 | 1.8° Step Angle

8618

HOLDING TORQUE
Up to 700 oz-in
(4.94 N-m)

8718

HOLDING TORQUE
Up to 1288 oz-in
(9.10 N-m)

XTREME TORQUE

NEMA 17 | 1.8° Step Angle

4418

HOLDING TORQUE
Up to 100 oz-in
(0.71 N-m)

G4518

HOLDING TORQUE
Up to 125 oz-in
(0.88 N-m)

NEMA 23 | 1.8° Step Angle

E5618

With **Enhanced** TECHNOLOGY
HOLDING TORQUE
Up to 150 oz-in
(1.06 N-m)
2.01" Max body length

E5718

With **Enhanced** TECHNOLOGY
HOLDING TORQUE
Up to 400 oz-in
(2.82 N-m)
3.54" Max body length

NEMA 34 | 1.8° Step Angle

E8718

With **Enhanced** TECHNOLOGY
HOLDING TORQUE
Up to 1500 oz-in
(10.59 N-m)
2.64" Max body length

WHISPER TORQUE

NEMA 23 | 0.9° Step Angle

G5709

With **Signature Series** TECHNOLOGY
HOLDING TORQUE
Up to 270 oz-in
(1.91 N-m)

GEAR MOTORS

NEMA 17 | 1.8° Step Angle

4418

With **Slim Line** GEARBOX
CONTINUOUS TORQUE
Up to 141 oz-in
(0.99 N-m)
Less than 2" in overall length

GET MORE TORQUE

With **Enhanced** TECHNOLOGY

Enhance your application's performance with the new NEMA 23 and 34 Enhanced Stepper Motor series!

The Benefits?

- ✓ No Stalling
- ✓ No Skipping Steps
- ✓ More Efficient

Get Up to

35%

More Torque with the Same Power Input

The Benefits?

- ✓ No Stalling
- ✓ Better Heat Dissipation
- ✓ Space Efficient

Xtreme Torque 4418S Series Comparison
1.8° Step Motor, 24VDC, Rated Current, Bipolar, 1/2 Stepping

More Torque = No Skipping Steps + Avoid Stalling

Get high accuracy, low resonance, and quiet performance from these stepper motors.

HIGH ACCURACY

NEMA 17 | 0.9° Step Angle

4209

HOLDING TORQUE
Up to 62 oz-in
(0.44 N-m)

NEMA 23 | 0.45° Step Angle

5704

HOLDING TORQUE
Up to 140 oz-in
(0.99 N-m)

NEMA 23 | 0.9° Step Angle

5609

HOLDING TORQUE
Up to 108 oz-in
(0.75 N-m)

Utilize over 40 years of design & development experience.

Whether you are looking for a simple plug & play solution or something a bit more advanced, we can help design, develop, and even manufacture products that are tailor made for your application

The Benefits?

- ▶ Save on development time
- ▶ Reduce overall product cost
- ▶ Utilize over 40 years of motion control experience

Below are 2 examples of products that were developed for specific customer applications:

1- Simple controller with variable microstepping and speed control via potentiometer

2- Controller with factory programmed settings. Variable settings include speed, time, microstepping, and direction.

Intuitive Graphical User Interfaces (GUI) can also be developed

Lin Driver shown as an example

- Flats on Front and Rear Shafts
- Shorter or Longer Shafts
- Cross Hole
- Connectors & Sleeving
- High Temp Environment

Headquarters in Nanjing, China

Scale your business with Lin Engineering at design and pre-production levels. At low volumes, Lin Engineering has full design and manufacturing capabilities in Morgan Hill, CA. For high volumes, we have a proven process for transferring both technology and product to our Asia Headquarters, LEaN, for cost effective manufacturing without sacrificing quality.

▼ The Benefits?

- ✓ Cost effective solution without sacrificing quality
- ✓ Double source through a single supplier
- ✓ Consistently high service and support
- ✓ Minimize lead times

▼ Customer Service

LEaN has a team of customer service personnel dedicated to providing you with personal and professional service.

▼ Quality & Reliability

Similar to Lin Engineering's U.S. headquarters, LEaN produces high quality and consistently reliable products.

LEaN

▼ Value Added Services

Whether its a simple request to add a cable or connector or something a bit more complex like mounting a pulley or customizing the motor's shaft, LEaN has a long list of value added services that help you minimize costs and lead times.

STEP MOTOR BASICS

CURRENT & VOLTAGE

Since step motors rotate by sending current to the different phases in a specific switching sequence each pulse that is sent to the motor must rise and deplete (also known as a current-rise time). At slow speeds, each step it takes should have plenty of time to fully rise to 100% current and deplete. You will receive maximum power and thus, the reason why torque-speed curves have high torque at the low speeds. Voltage acts like a means to allow current to flow faster or slower. If you increase voltage, you are pushing the current through the motor windings at a faster rate. Now, instead of only rising and depleting about 50% of the max current, perhaps it has increased to about 60 or 75% by increasing the voltage.

Below shows a few curves that depict what different voltages and currents do to the torque-speed curves of several motors.

This curve shows that current will affect the slower speeds

This curve shows that voltage affects the curve at higher speeds

EFFICIENCY

An efficiency curve exists for every motor to help ensure that the proper one has been selected. The image depicts three different motor efficiencies when plotted across a speed range. Some motors, such as #1, perform at their best only at low speeds while others, such as #3, perform better at high speeds.

TIPS ON REDUCING RESONANCE:

Every step motor has a resonant frequency wherein more vibration will be seen by the motor at a specific speed. This resonant frequency is due to the oscillation (i.e. back and forth movement) that occurs before the motor settles into each desired position. The oscillation frequency will resonate at certain speeds and cause a 1st order, 2nd order and sometimes even a 3rd order amplitude at several speed ranges. A classic example is vibration seen at 1 RPS (the 1st order), and then slightly less vibration at 2 RPS (the 2nd order).

Below is a graph of a step motor's step response or the oscillation that the motor makes just prior to settling into the desired position. In this particular graph, the desired position was going from 0 to 0.9 degrees.

STEP RESPONSE

Although resonance cannot truly be avoided, there are ways to both reduce resonance and shift the resonance to a different speed location altogether. Looking at the equation for the resonant frequency, ω , the two main factors are Torque Stiffness and Inertia. By changing one of these factors, you can shift the resonance to a lower or higher speed.

INCREASE OR DECREASE VOLTAGE AND/OR CURRENT

By changing the input voltage to the drive, or changing the current (Amps) going from the driver to the motor windings you are essentially altering the torque, and therefore the top numerator of the frequency equation. If you are able to sacrifice some torque, try decreasing the overall power as this could help reduce or shift resonance away from your operating point.

INCREASE YOUR INERTIA LOAD

When you add more load to the shaft of the motor, you are essentially dampening the vibrations. Based on the equation, increasing the bottom denominator will shift the resonance to a lower spot.

INCREASE MICROSTEPPING

If you have capabilities to increase microstepping from the driver this will force the motor to take much smaller steps which will oscillate much less. Reducing the amount of oscillation directly reduces the amount of resonance. This method reduces resonance across the entire speed range.

CHOOSE A DIFFERENT MOTOR

If all else fails you may need a different motor. In most cases, the motor is too powerful and causes vibration and resonance since it is expecting to move a much heavier load. Choosing a motor that is more suitable for the job could be the solution. If all else fails try Lin Engineering's Signature Series line of steppers which are mechanically designed to reduce vibrations for a smoother motion profile. See page 6-7 for further details.

WE PROVIDE SOLUTIONS for Motion Control Applications

Lin motors are used to enhance a variety of different applications in these industries:

Medical Devices

Security & Surveillance

Semiconductor

3D Printing

Industrial Automation

Tracking Systems

Food & Beverage

Packaging & Labeling
