

VACUUM TECHNOLOGY-I

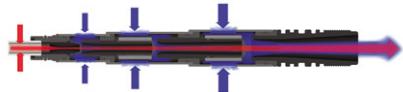

ISO 9001 CERTIFIED

- The “V” in our logo comes from Vacuum technology and “MECA” comes from the Mechanical technology.
- By using the vacuum cartridge icon and blue VTEC color, it clearly reminds that “VMECA” is the same brand as VTEC.
- The VMECA reflects vacuum and mechanical technologies that combines well and supplies complement system to the customers.

- PRINCIPLE

PATENT &
PATENT PENDING

- Vacuum is created with an air-jet system when ① compressed air (3-6bar) passes at high speed through the ② pump nozzles.
- VMECA Vacuum Cartridge is a new and innovative multistage vacuum pump.
 - It is extremely compact in size and very light weight.
 - It is “engineering and design friendly” making it easy to create a vacuum pump and system for a specific application or machine.
- The VMECA Vacuum Cartridge provides a high vacuum flow rate (3x higher) and an extremely quick response time (about 1.5x greater) compared to typical and conventional ejectors.
- The VMECA Vacuum Cartridge operates using compressed air at a pressure of 1.7 ~ 6bar and maintains vacuum despite fluctuations and drops in air pressure.
- The VMECA Vacuum Cartridge design allows the pump to be located near or at the point of use reducing system volume, increasing speed and reducing cycle time.
Reduced system volume means fewer connections, fewer potential leaks, and less air to evacuate allowing for an incrementally smaller pump using less compressed air.

Vacuum Equipment / Common Precautions

Be sure to before handling.

Selection & Design

⚠ Warning

- ▶ Safe designs should be developed, which accounts for the possibility of accidents resulting from a drop in vacuum pressure due to power failure or trouble with the air supply, etc.

If vacuum pressure drops and there is a loss of vacuum pad adsorption force, work pieces being carried may fall, causing human injury or damage to machinery. Safety measures should be implemented such as the installation of drop prevention guides.

- ▶ Follow vacuum specifications for vacuum switching valves and vacuum breakers.

If valves are installed in vacuum piping which do not follow vacuum specifications, vacuum leakage will occur. Be certain to use vacuum specification valves.

- ▶ Select vacuum pumps which have a suitable suction flow rate.

<When there is a vacuum leak from the work piece or the piping>

If the vacuum pump suction flow rate is too low, this will cause poor adsorption.

<When piping is long or large diameter>

The adsorption response time will increase due to the increased volume of the piping. Select vacuum pumps with a suitable suction flow rate by referring to their technical data.

- ▶ If the suction flow rate is too high, setting of vacuum switches will become difficult.

In the case of adsorbing a small work piece of only a few millimeters, if an vacuum pump is selected which has a high suction flow rate, the pressure difference when adsorbing and releasing the work piece is small, and sometimes setting of the vacuum switch becomes difficult. Therefore, an appropriate vacuum pump should be selected.

- ▶ When two or more pads are piped to one vacuum pump, if one pad releases its work piece, the other pads will also release.

When one pad is removed from its work piece, there is a drop in vacuum pressure which causes the other pads to release their work pieces also.

- ▶ Use piping with an adequate effective sectional area.

Select piping for the vacuum side which has an adequate effective sectional area, so that the vacuum pump's maximum suction flow rate can be accommodated by the piping. Also, make sure that there are no unnecessary restrictions or leaks, etc. along the course of the piping. The piping on the air supply side must be designed so that it corresponds to each vacuum pump's air consumption. The effective sectional area of tubing, fittings and valves, etc., should be sufficiently large, and the pressure drop reaching the vacuum pump should be kept to a minimum. Furthermore, design of the air supply should be performed while taking into consideration the vacuum pump maximum air consumption and the air consumption of other pneumatic circuits.

⚠ Caution

- ▶ For information on related items, such as directional control equipment and drive equipment, refer to the caution sections in each respective catalog.

Mounting

⚠ Warning

- ▶ Do not obstruct the exhaust port of the Vacuum pump.

If the exhaust port is obstructed when mounted, a vacuum will not be generated.

Piping

⚠ Caution

- ▶ Avoid disorganized piping.

Piping which is direct and of the shortest possible length should be used for both the vacuum and supply sides, and dis organized piping should be avoided. Unnecessary length increases the piping volume, and thus increases the response time.

- ▶ Use piping with a large effective sectional area on the exhaust side of the vacuum pump.

If the exhaust piping is restrictive, there will be a decline in the vacuum pump's performance.

- ▶ Make sure that there are no crushed areas in the piping due to damage or bending.

Operating Environment

⚠ Warning

- ▶ Do not operate in atmospheres of corrosive gases, chemicals, sea water, water or steam.

- ▶ Do not operate in explosive areas.

- ▶ Do not operate in locations where vibration or impact occurs.

- ▶ Confirm the specifications for each series.

- ▶ In locations which receive direct sunlight, provide a protective cover, etc.

- ▶ In locations near heat sources, protect against radiated heat.

In locations where there is contact with spatter from water, oil or solder, etc., implement suitable protective measures.

- ▶ In cases where the vacuum unit is surrounded by other equipment, etc., or the unit is energized for an extended time, implement measures to exhaust excess heat, so that temperatures remain within the range of the vacuum unit's specifications.

Maintenance

⚠ Warning

- ▶ Clean suction filters on a regular basis.
(Refer to specifications).

The performance of vacuum pumps will deteriorate due to clogging in filters. Large flow filters should be used, especially in dusty locations.

Pressure and vacuum comparison tables

Thread Systems

ISO THREAD:

Cylindrical metric thread: designated with the letter M. Example M5.

Cylindrical inch thread (also called Unified thread): designated with the letter UNF Example 10-32UNF.

DRY SEAL THREAD (AMERICAN SYSTEM OF PIPE THREADS):

The dry seal system consists of cylindrical and conical pipe-threads. The threads have a 60° profile angle and are scaled without packing or seal rings (Please note that when these are used in other combination of thread systems, that "sealing" is not applicable). The dimensions are given in inches and VMECA's catalogue uses the letters NPT and NPSF:

Conical thread is designated NPT. Example: 1/8" NPT

Cylindrical thread is designated with the letters NPSF. Example :1/8" NPSF

BSP THREAD (BRITISH SYSTEM OF PIPE THREADS):

The threads have a 55° profile angle and are dimensioned in inches.

Cylindrical thread is designated with the letter G. Example: G1/8".

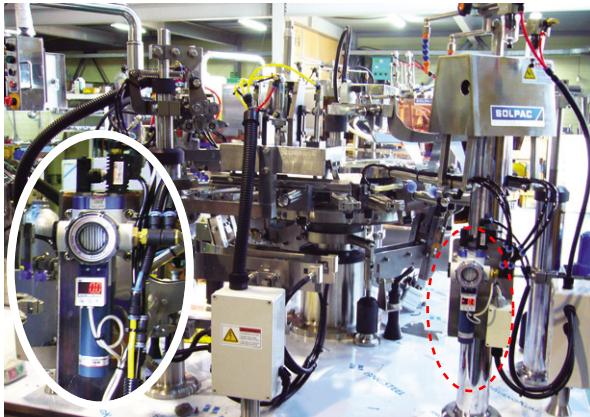

COMPATIBILITY OF DIFFERENT THREAD SYSTEMS:

Please note that some thread size in different thread systems not always fit. See below table.

	M5 male	M5 fem.	G1/8" male	G1/8" fem.	G1/4" male	G1/4" fem.	G3/8" male	G3/8" fem.	G1/2" male	G1/2" fem.	G3/4" male	G3/4" fem.	G1" male	G1" fem.	G2" male

Fittings for Suction cups P.68~74

1. Advantages of suction cup

Materials' handling with suction cup is very simple low cost and reliable. It is therefore a solution worth using before considering more complicated handling techniques. Suction cups can lift, and hold objects from a few grams up to several kg.

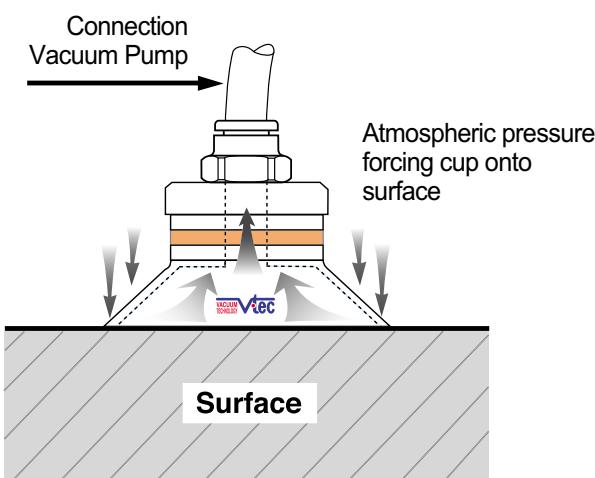

► Advantages

- ✓ Easy installation
- ✓ Low service requirement
- ✓ Low price
- ✓ Does not damage the goods
- ✓ Fast attachment and detachment

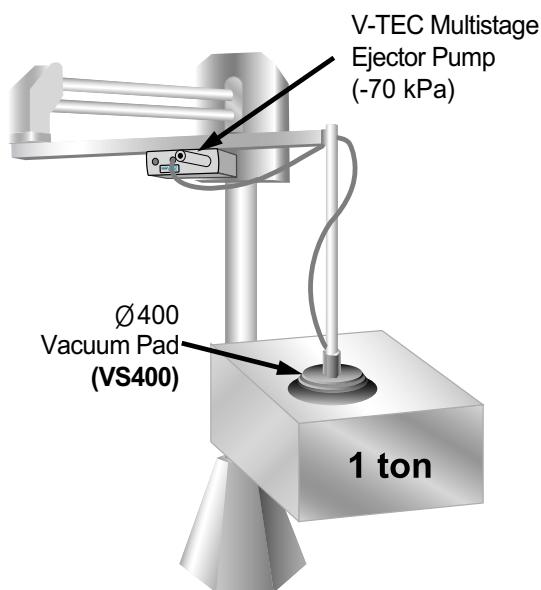

SUCTION
CUPS

2. The principle of suction cup

Why does a suction cup suck onto the surface it's placed on? It's quite simple and is all to do with atmospheric pressure. Atmospheric pressure can generally be defined as the weight of the air above us on earth. When a lower pressure is created (vacuum) than atmospheric pressure (1 bar), forces are produced; these forces are required to enable suction cups to work. As a vacuum is drawn through the cup, the atmospheric pressure outside the cup is greater than that inside the cup, thus creating a holding force between the cup and the surface, the larger the cup and deeper the vacuum then the greater the holding force.

How a suction cup works.

Weights that can be lifted with suction cups.

3. How to select the suction cup

$$D = 113 \times \sqrt{\frac{m \times n}{U \times s}}$$

D : Suction cup dia. (mm)

m : Mass to lift (kg)

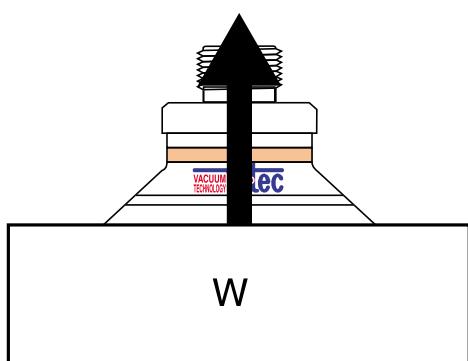

u : Vacuum level (-kPa)

n : Safety factor (2 or 3)

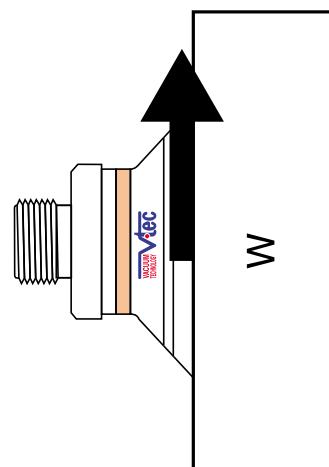

s : Quantity of cup

4. Calculating achievable perpendicular / parallel lifting force (-60kPa=-450 mmHg)

Perpendicular

Parallel

Lift : Formula

W : Lifting force (N)

P : Vacuum level (-kPa)

S : Size of suction cup (cm²)

n : Safety factor [Perpendicular : insert 2 or 3
 Parallel : 3 insert or 4

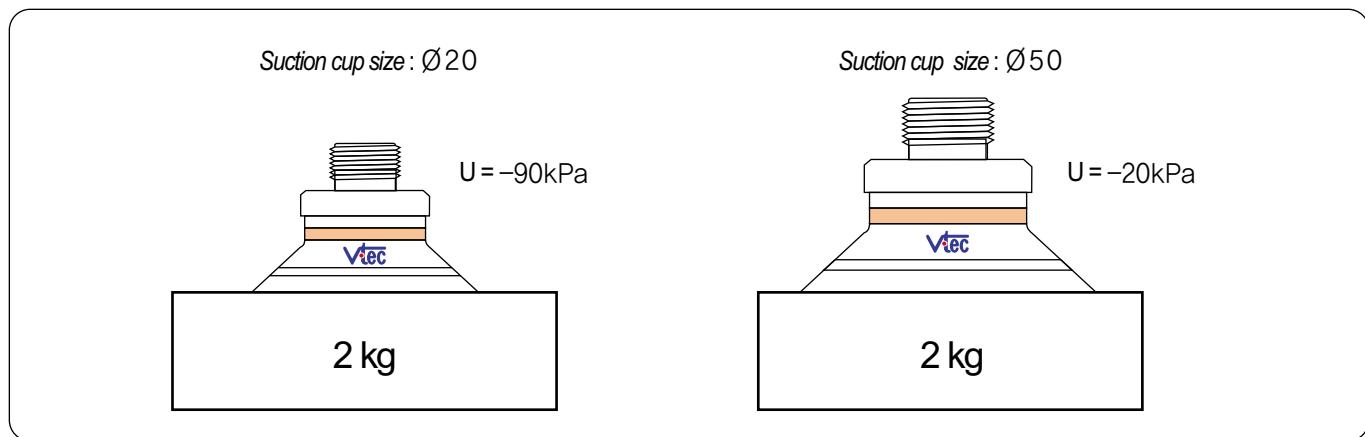

$$W = P \times S \times 0.1 \times \frac{1}{n}$$

5. Recommended vacuum level to use (-60kPa)

There are several reasons why -60 kPa is the optimum vacuum level to use with suction cups. The energy required creating -60 kPa is low in comparison to that required generating -90 kPa. The additional lifting force that can be achieved between these two levels is not that high, considering that it takes approx ten times as much energy to create the -90 kPa level. If a vacuum circuit is designed to run at -90 kPa then clearly there is very little capacity left in the pump performance, thus no margin for error. Lastly suction cups running at -90 kPa adhere to the surface with far more contact force, hence stressing the cup much more, which will result in premature wear of the cup itself.

For example

Object	Vacuum level	Cup size
2kg	-90kPa	Ø20
	-60kPa	Ø30
	-20kPa	Ø50

Lifting force comparison table for cup size

Cup Size (mm)	-60kPa Lifting force(kg) Perpendicular				-60kPa Lifting force(kg) Parallel

6. Applications for suction cups

Vtec suction cups are available in a wide range of shapes, sizes, materials and configurations. The standard cups range from 2mm to 400mm in diameter, with lifting forces of up to 1300kg at - 90kPa. Many types of object and materials can be lifted, flat, curved, smooth, coarse, dense and porous.

All the cups are manufactured to very high standards, and cups can be ordered separately or complete with fitting.

How to select a suction cup

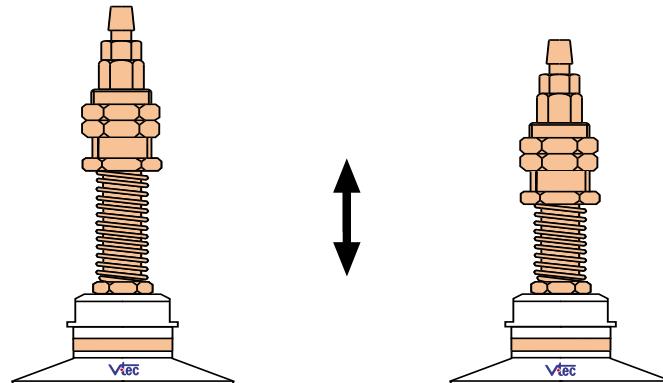

1. Choose the model depending on the shape of object to lift.
2. Choose the size of the cup based on the weight of the object to lift.
3. Choose lie material of the cup based on the working environment and surface texture.
4. Select the fitting size to suit the application.
5. Select the accessory depending on the application i.e.. level compensator or ball joint.

Type	Description	Some Applications
VB (Bellows) 20 ~ 23		The bellows cup is very good at compensating for a degree of difference in level and curvature of the work piece Sheet Veneer Plastic Sheets Thin Film Sheets Cardboard Boxes and Electronic components
VB-M (Direct Fitting Bellows) 24		Same general advantages to that of the normal bellows cups but can be fitted directly onto a piece of pipe, thus making installation very simple and reducing pad costs to a minimum, very suitable for integration to packaging machines. Sheet Veneer · Plastic Sheets Cardboard boxes Cardboard Packaging Materials Thin Film Sheets
VBF (Bellows & Flat) 26 ~ 29		Good lifting force can be achieved with this cup in the vertical plane. Prevent transformation when lifting metal thin plate. · Vaneer sheets · Sheet metal · Automotive body panels and door · Plastic sheets · plywood · Glass
VBL (Long Bellows) 30 ~ 33		Similar advantages to that of the normal bellows cups but can cope with an increased degree of height compensation and is particularly good for handling fragile objects Fragile Objects · Eggs General Foodstuffs · Bread Glass
VU (Universal) 34 ~ 37		Good lifting forces can be achieved with this cup, is best suited to flat stable surfaces, but can cope with a small degree of curvature. Small Components Semiconductor Chips Packaging Materials Sheet Metal
VF (Flat) 38 ~ 43		Again good lifting forces can be achieved with this pad; optimum-lifting forces can be achieved with this cup in the horizontal plane, but is also good in the vertical plane. Sheet Metal Veneer Sheets Plastic Sheet Material Electronic Components
VFC (Flat Curve) 44 ~ 47		This pad is specifically designed to cope with both flat and curved surfaces, which means that multiple objects can be handled with the same vacuum pad Automotive Windscreens Shaped Sheet Metal Panels Sheet Metal
VD (Deep flat) 48 ~ 49		Features and strengths This is best suited to curved or irregular surfaces Also, it is deep and grip around corners and edges. Plastic sheets Sheet veneer Sheet metal Shaped sheet metal panels
VOU (Oval Universal) 52 ~ 53		Best suitable for handling long objects With flat and curved surfaces Semiconductor chips Electronic components Small ampul
VOC (Oval Curved) 54 ~ 55		This pad is best suitable for handling long objects With flat or curved surfaces. Specially, parallel to the surface of the object it has a thick and durable lip. Long objects with flat Curved surfaces Shaped sheet metal panels
VS (Sponge) 50 ~ 51		Used for handling rough and uneven surfaces and when used with ball joint option and level spring option can accommodate very unlevel and uneven surfaces. Handling thin Film with adjustable support Rough Wood Paving Slabs Masonry Bricks
KPS (Plastic Bag Opening) 56 ~ 57		Developed to be used for opening plastic bags this pad gives good adhesive to thin plastic and film type materials. Thin film sheet and plastic bags, Plastic Bag Opening, paper Bag Handling Thin Film Materials
NF (Non-touch Flat) 58 ~ 59		Non-contact handling item. Safe gripping with mark free. No moving parts. Circuit boards, CDs and DVDs, Metal, Wood, Packaging, Plastic, Thin products, Film, Paper, Mirrors, Paper-board..

7. Accessories

Level Compensator

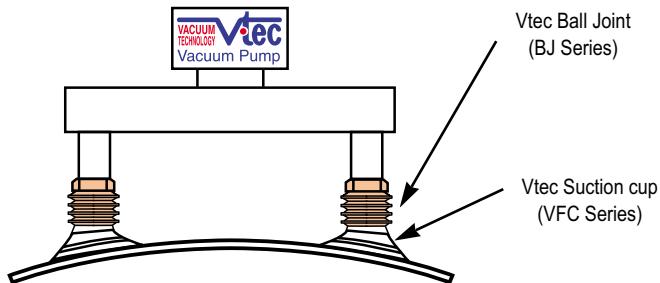

The Vtec level Compensator is used to compensate for differences in height on the surface of the material that is to be lifted. The advantage being a more reliable and less precise pick up position when handling product that may be less consistent in its shape, size and position. The level compensator also provides a degree of shock absorption should this be required. The level compensator come in configurations with varying sizes of spring and stroke.

SUCTION CUPS

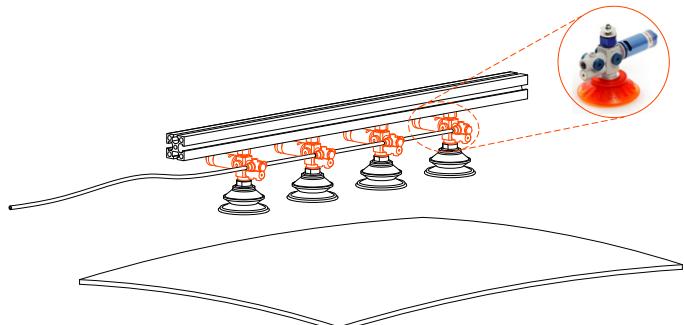

Ball Joints

The Vtec Ball Joint or sometimes referred to as a universal joint is for use when a degree of angular compliance is required, more commonly used with flat type cups which unlike bellows do not allow for much angular compliance as part of there design. The vacuum port is integral through the center of the joint thus providing a neat and compact solution.

Vacuum speeder

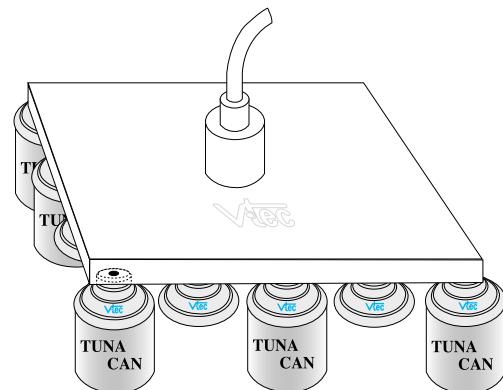

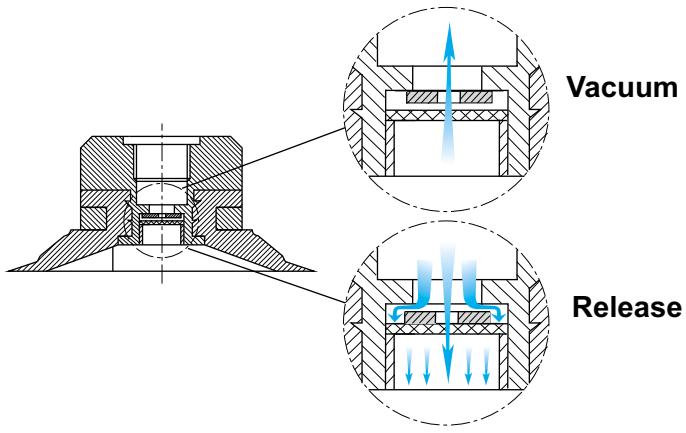

Vacuum speeder is a combination of a vacuum cartridge and suction cup. VSM is available for various mounting options, accessible parts, and interchangeable parts. Due to this it is easily possible to make a compact and simple vacuum system. The vacuum cartridge is located close to the suction point providing you with an extremely quick response time.

7. Accessories

Vacuum Efficiency valve (EV)

Ordered as an integral part of the suction cup, the valve is useful on applications where multiple cups are used and not all cups come into contact with surface to lift. The valve has a small vacuum port so as not to degrade the vacuum supply if the cup is uncovered whilst still providing enough flow to achieve the required vacuum. When the cup comes in contact with the surface only the volume inside the cup has to be evacuated. When release of the product is required, this can still be done quickly, because as air is forced back through the cup the plate valve opens up and allows full flow through. This valve is only suitable for use with smooth surface non-porous materials.

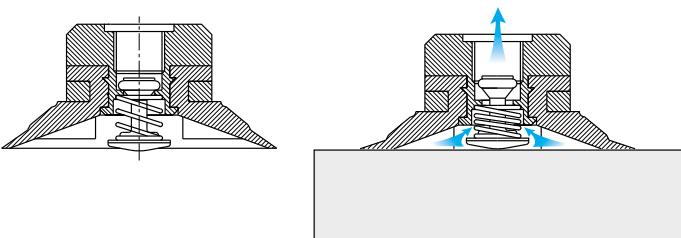

Button Valve : BV

When the suction cup is not in contact with the object, the valve closes the opening in the fitting. No air can flow through the suction cup and the pump does not need to compensate for leakage. The system is not disturbed and vacuum is maintained up to the fitting.

The valve first opens when the suction cup makes contact with the object.

The air can then flow through the fitting and vacuum is created in the cup.

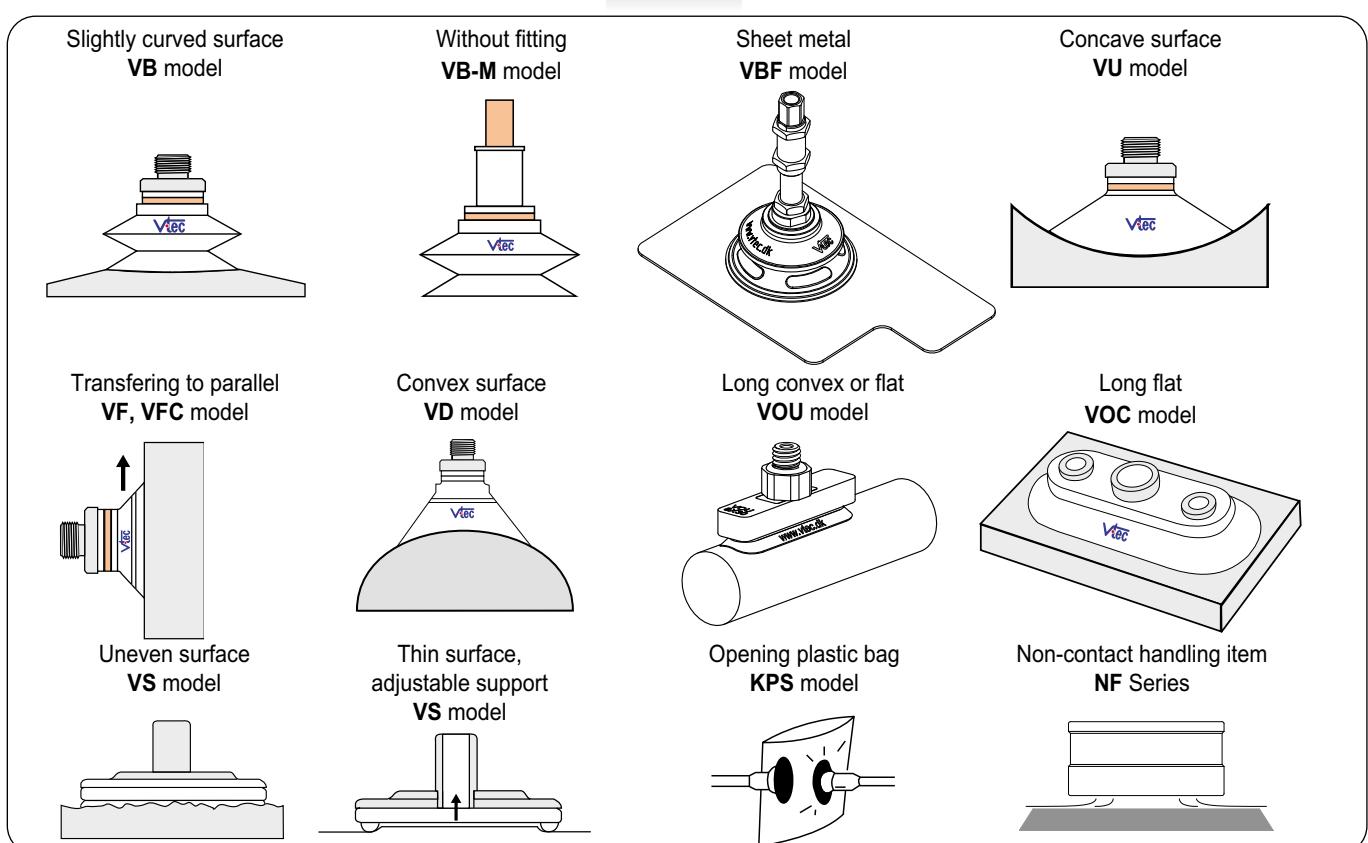

8. Material and characteristic of suction cup

Material	Temperature	Durability	Oil Resistance	Weather & ozone
N - NBR	-20°C to + 110°C	Excellence	Excellence	Very good
S - Silicon, WS-White Silicon	-70°C to + 200°C	Good	unsuitable	Excellence
HS - High Temp. Silicon	-70°C to + 280°C	Good	unsuitable	Excellence
C.S - Conductive (special material)	-45°C to + 90°C	Excellence	Excellence	Very good
U - Urethane	0°C to + 100°C	Excellence	Excellence	Excellence
A - Mark free	-10°C to + 100°C	Excellence	Excellence	Very good
PU- Poly Urethane	-0°C to + 60°C	Excellence	Excellence	Excellence
E - EPDM	0°C to + 150°C	Very good	unsuitable	Excellence

9. How to select suction cup

www.vmeca.com

VB Series (Bellows)

Features and Strengths

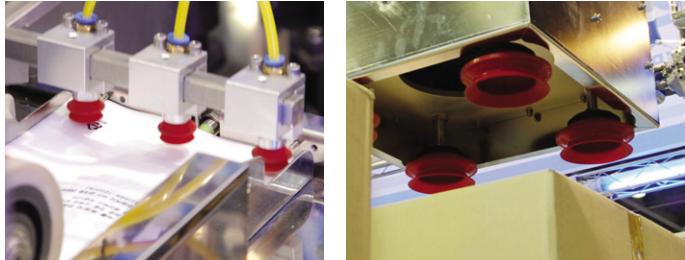

Particularly good for use on curved surfaces and for separating thin sheets of materials in stacks.

The bellows cup is very good at compensating for a degree of difference in level and curvature of the work piece, more angular and level compensation can be achieved by using other **Vtec** cup accessories.

Suitable for Handling

- Sheet Veneer
- Plastic Sheets
- Paper Box handling
- Thin Film Sheets
- Cardboard Boxes and Electronic Components

Order No.

VB30 PU F - 18F EV - L1820T - BJ18

VB150	- Ø150

② Material

N	- NBR
S	- Silicon
WS	- White Silicon
HS	- High Temp. Silicon
CS	- Conductive (Special mat'l)
U	- Urethane
A	- Mark Free
● PU	- Poly Urethane *
WPU	- Poly Urethane * (Minimal mark)

* Only for VB15, VB20, VB30, VB40, VB50, VB75

④ Thread size

M5M	- M5 male (VB5, VB8, VB10, VB12, VB15)
18M	- G1/8" male (VB30, VB40)
14M	- G1/4" male (VB30, VB40, VB50)
38M	- G3/8" male (VB50)
M518MF	- M5 female and G1/8" male (VB17, VB20)
M518MFB*	- M5 female and G1/8" male (VB20)
● 18F(A)	- G1/8" female (VB17, VB20, VB30, VB40, VB50, VB75, VB75B)
18FB*	- G1/8" female (VB30, VB40)
14F(A)	- G1/4" female (VB75, VB75B)
38F(A)	- G3/8" female (VB75, VB75B)
12F(A)	- G1/2" female (VB75, VB75B, VB110, VB110B, VB150)
M5X5F	- M5X5 female (VB17, VB20)
18X5F	- G1/8" X 5 female (VB30, VB40, VB50)

Remark : VB30~150 fittings are including mesh filter.

* Only for silicon material

(A) : AL-Material (Only VB75, VB75B)

③ Filter

no mark	- Standard
● F	- With filter (PE) VB30, VB40, VB50, VB75, VB110

⑤ Valves Efficiency valve : EV

no mark	- standard
● EV	- Vacuum efficiency valve (See page : 16) (VB17, VB20, VB30, VB40, VB50)

VB-M Series (Direct Fitting Bellows)

Features and Strengths

Same general advantages to that of the normal bellows cups but can be fitted directly onto a piece of pipe, thus making installation very simple and reducing cup costs to a minimum, very suitable for integration to packaging machines.

Suitable for Handling

- Cardboard
- Packaging Materials
- Thin Film Sheets
- Sheet Veneer
- Plastic Sheets

Order No.

SUCTION
CUPS

VBL Series (Long Bellows)

Features and Strengths

Similar advantages to that of the normal bellows cups but can cope with an increased degree of height compensation and is particularly good for handling fragile objects.

A note of caution, these cups are not suitable for high level vacuum applications.

Suitable for Handling

- Fragile Objects
- General Food Products
- Glass
- Eggs
- Bread

VF Series (Flat)

Features and Strengths

Good lifting forces can be achieved with this cup in the horizontal plane, but is also good in the vertical plane.

The feet inside the cup provide a good register as well as enhancing the adhesion to the surface.

Suitable for Handling

- Sheet metal
- Plastic
- Veneer Sheets
- Electronic components

Order No.

VF40 PU - 18F BV - L 1820T BJ 18

VFC Series (Flat Curve)

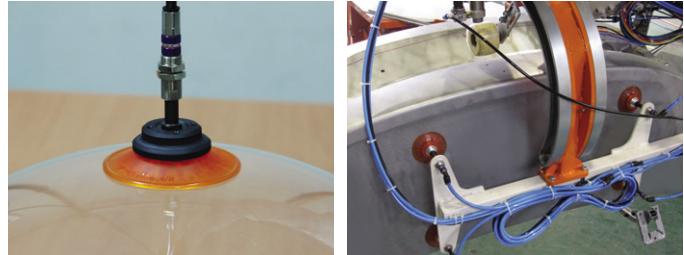

Features and Strengths

This cup is specifically designed to cope with both flat and curved surfaces, which means that multiple objects can be handled with the same suction cup.

Suitable for Handling

- Automotive Windscreens, Roof and Door.
- Sheet Metal
- Shaped Sheet Metal Panels
- TV Cathode ray Tube

Order No.

VOU-Series

Features and Strengths

- Best suitable for handling long objects with flat and curved surfaces
- Good lifting forces can be achieved with small size
- Conductive silicon is excellent for handling PCB board or Electronic components
- Easily mountable without detaching a fitting from the machine (save the maintenance time)

Suitable for Handling

- Semiconductor Chips (PCB board)
- Electronic components
- Small glass cases (e.g. ampule)
- Pipe

VOC Series (Oval Curved)

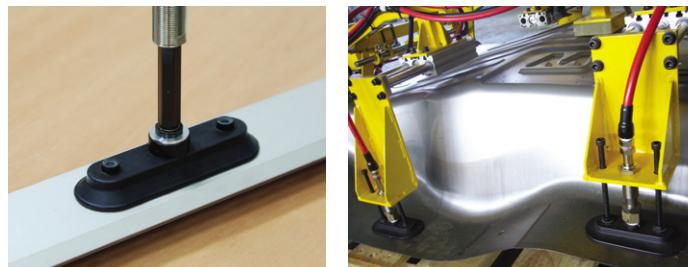

Features and Strengths

This cup is best suitable for handling long objects with flat or curved surfaces. Specially, parallel to the surface of the object it has a thick and durable lip.

Suitable for Handling

- Long Objects with Flat
- Curved Surfaces
- Shaped Sheet Metal Panels
- Automotive Bumper

Order No.

NF Series (Non-touch Flat)

PATENT &
PATENT PENDING

Main advantages

- Non-contact handling item
- Integrated Multi-suction system
- Low air consumption
- Large vacuum flow and powerful suction force
- Safe gripping with mark free
- No moving parts
- Excellent gripping with metal sheets with holes.

Application

Circuit boards, Solar cell, CDs and DVDs, Uneven sheet
Wood, Packaging, Plastic, Thin products, Film, Paper,
Mirrors, Paper-board..

Order No.

Applications

Level Compensator

Features and Strengths

The Vtec level compensator is used to compensate for differences in height on the surface of the material that is to be lifted. The advantages being a more reliable and less precise pick up position when handling product that may be less consistent in its shape, size and position. The level compensator also provides a degree of shock absorption should this be required. The level compensator come in configurations with varying sizes of spring and stroke.

Ball Joints

Features and Strengths

The Vtec Ball Joint or sometimes referred to as a universal joint is for use when a degree of angular compliance is required, more commonly used with flat type cups which unlike bellows do not allow for much angular compliance as part of their design.

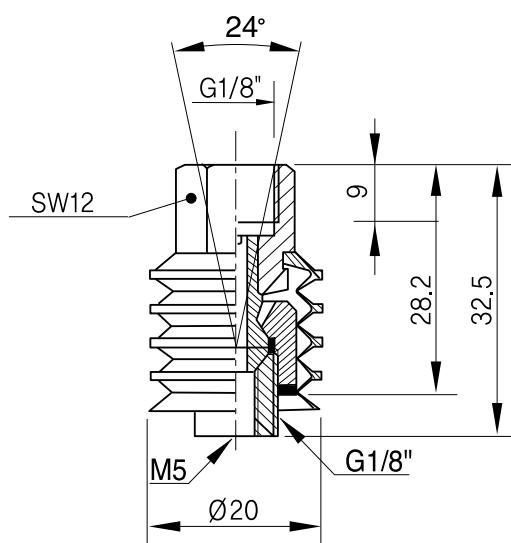

The vacuum port is integral through the centre of the joint thus providing a neat and compact solution.

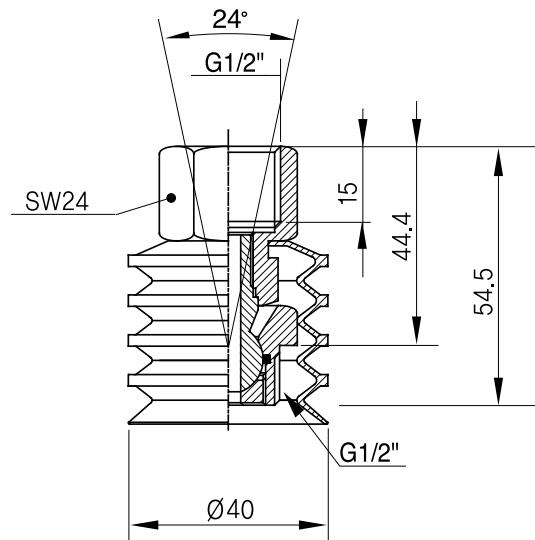

Dimensional Information

Model	Thread Size	Angle	Max. Load (kg)	Weight (g)

[Measure unit : mm]

Fitting Connector

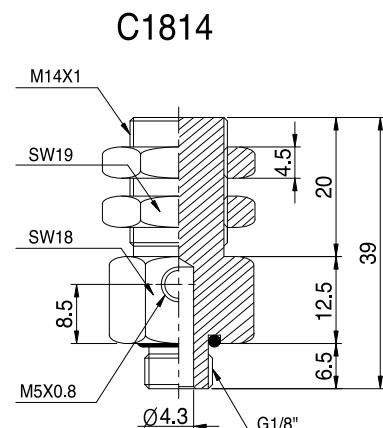

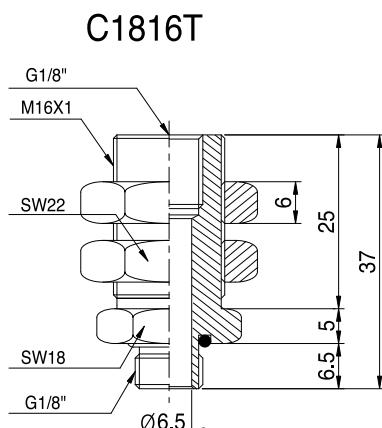

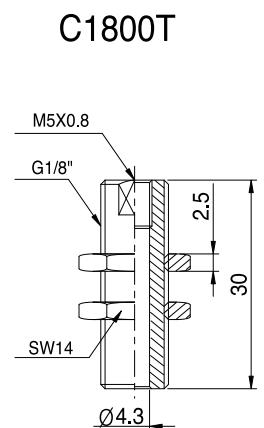

Features and Strengths

VTEC Fitting Connector is specifically designed to allow an assembled suction cup with fitting to mount easily on a plate. Fitting Connector has various sizes of thread options of vertical or horizontal types for vacuum connection ports. The lightweight aluminum body of the Fitting Connector is essential in making a complete vacuum line for a compact system.

SUCTION CUPS

Fittings (Option)

VACUUM SPEEDER

VACUUM
SPEEDER

Select Vacuum speeder

• Select Vacuum Cartridge

- Choose the non-return valve option for sealed system applications to prevent immediate loss of vacuum and resulting release of product, etc due to an interrupted air supply.

► Select a VSM (Vacuum Speeder) without a vacuum cartridge when using as a slave to another vacuum source; typically sealed applications or where fast response time is not required.

► Select a VSM with VMECA 2-stage VC202 Mini cartridge to provide sufficient vacuum flow (up to 41 Nl/m) for sealed applications (i.e. sheet metal handling) or for low volume applications (i.e. small vacuum cups).
Optional non-return valve available.*

► Select a VSM with the VMECA 3-stage VC203 cartridge (vacuum flow up to 85 Nl/m) for quick response time in high volume, sealed applications (i.e. large vacuum cups) or for non-sealed applications (i.e. cardboard handling) where high vacuum flow is required.
Optional non-return valve is available.*

• Select mounting and mounting position

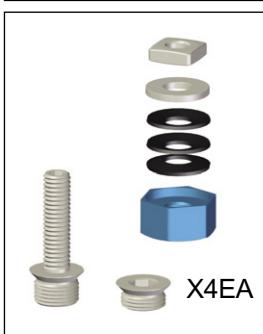

► Option "F" - Direct Plate Mounting exm. ①

Mount directly to a plate (top mounting only) using the (4) M4 screws. (5) G1/8 plugs also included.

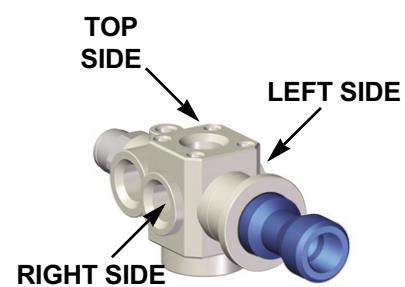

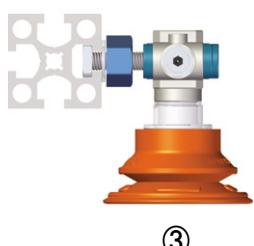

► Option "M" - M8 Male Mounting exm. ②

Mount using M8 male fixed at factory in one of 3 specified positions (top, right, left). (4) G1/8 plugs are included. Left and right side mounting provides a lower profile vs. top mounting.

► Option "P" - T - Slot Frame Mounting exm. ③, ④

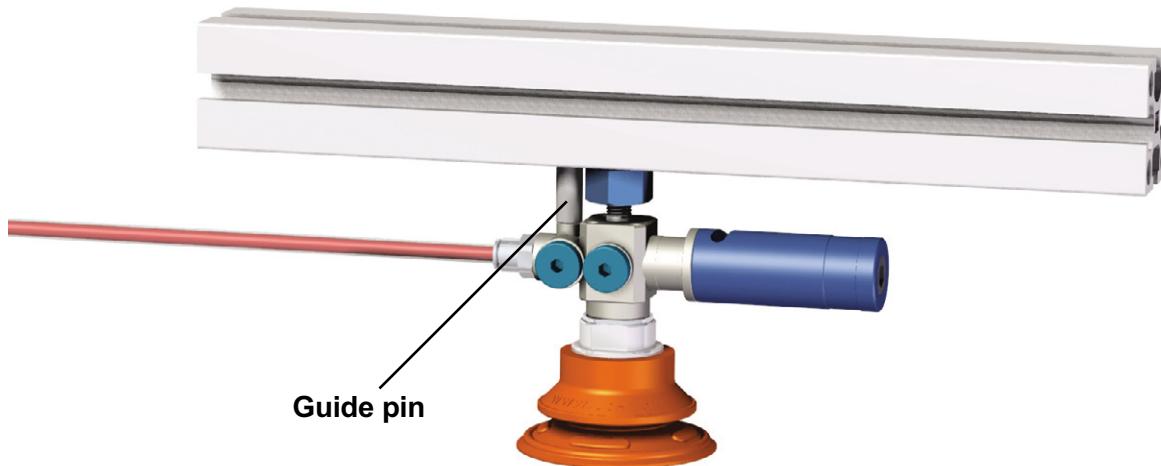

Mount to appropriate t-slot frame in one of (3) positions (top, right, left) using (1) M8 27mm or (1) M6 22mm screw as specified with supplied nut and washers. (4) G1/8 plugs are included. Optional non-return valve is available.*

VSM Example

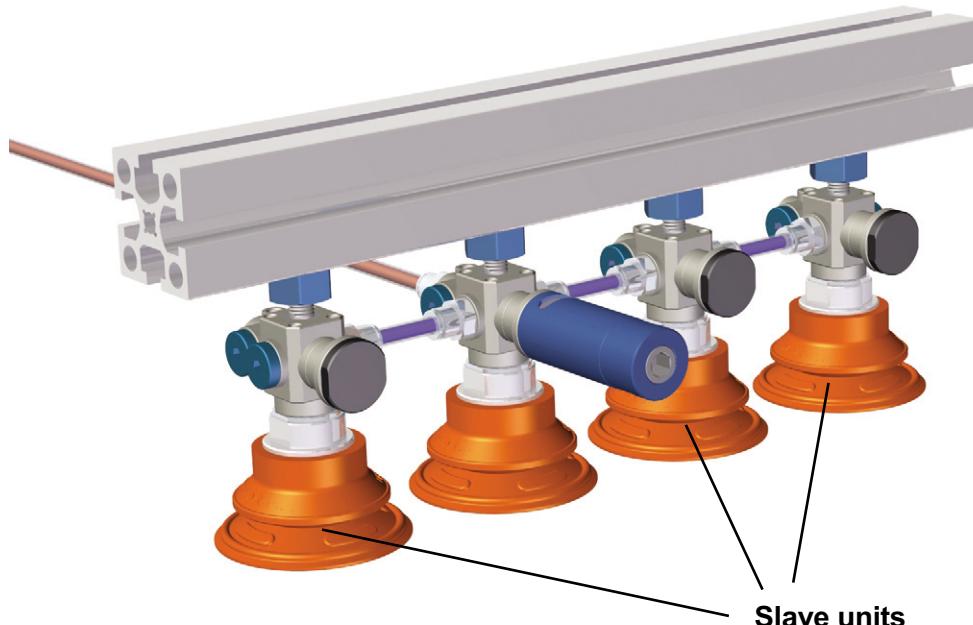

Compressed air

Vacuum

- ▲ To prevent the Vacuum Speeder from rotating when mounted in the top position use a guide pin inserted into the M5 port on the top of the VSM and extended into the t-frame slot.

VACUUM
SPEEDER

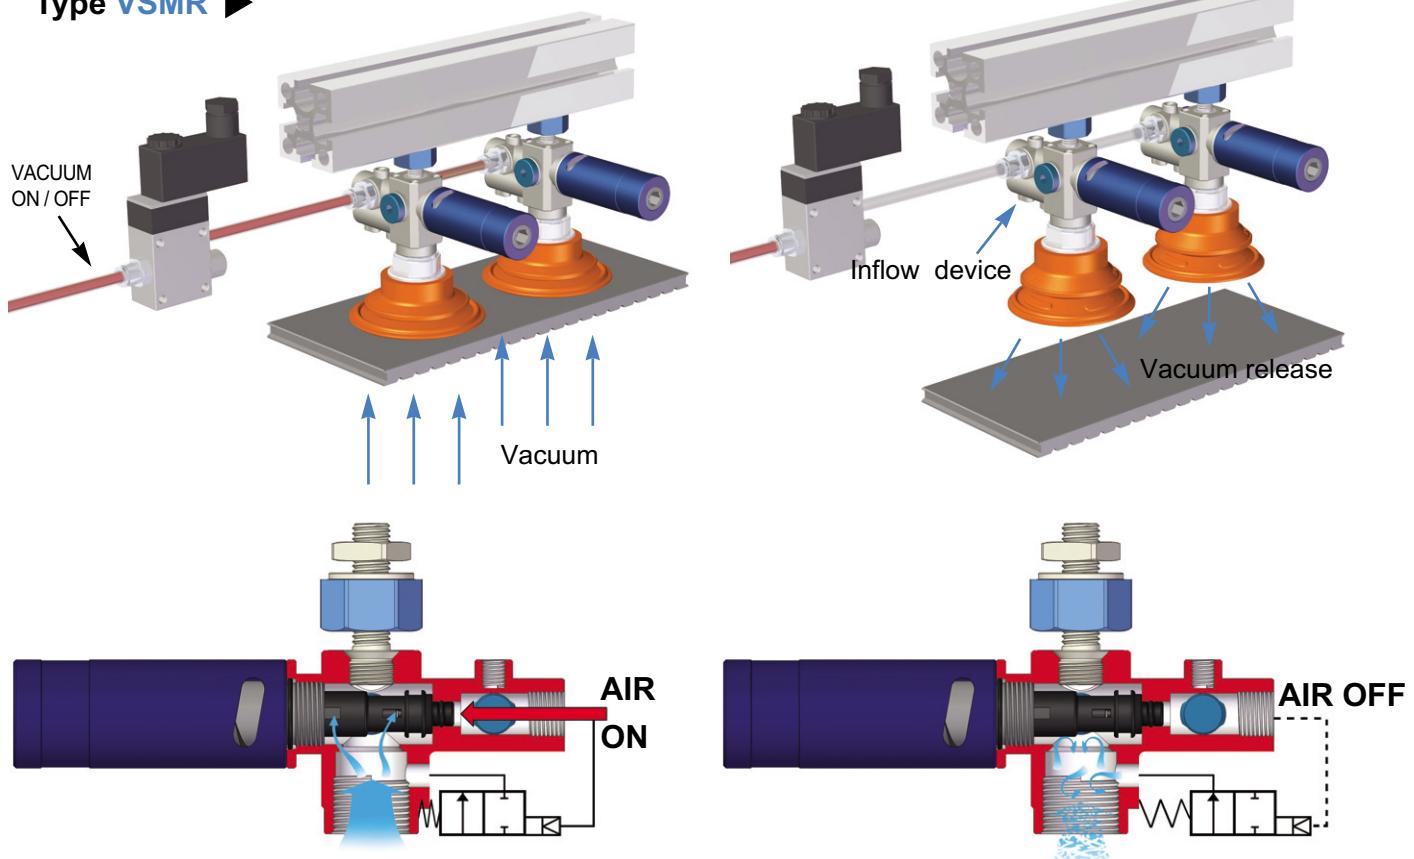

- ▲ Use a VSM (Vacuum Speeder) as a slave unit with vacuum supplied by another VSM in sealed applications or in applications where quick response time is not required.

Example

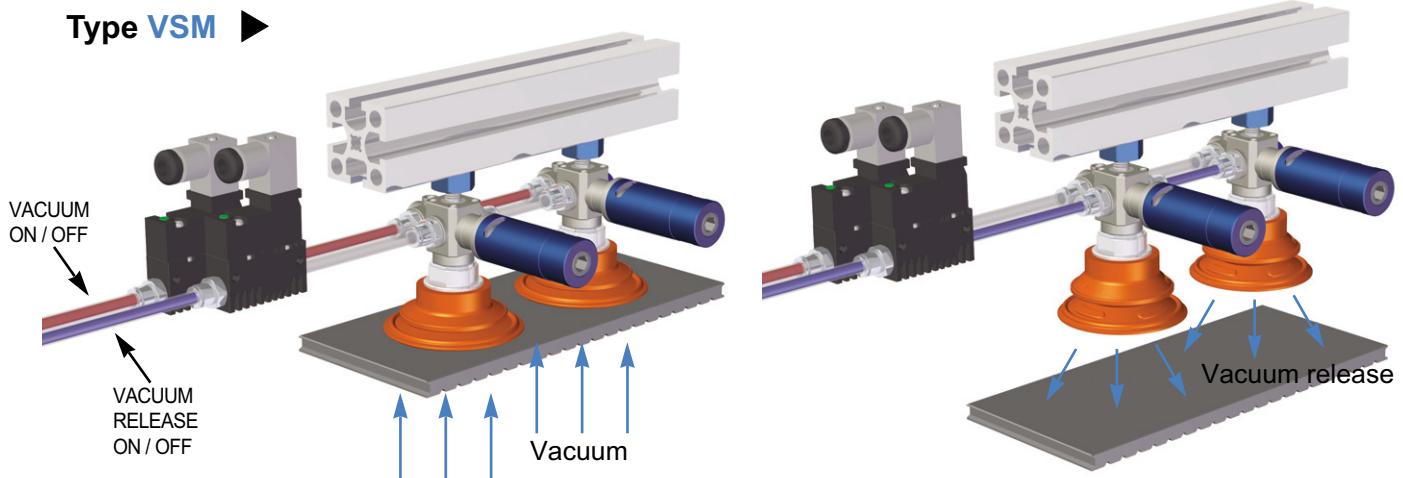

• VACUUM RELEASE

Type VSMR ►

▲ Automatic faster release(blow-off) by inflow device of outside air is available **without** any release control valve or line. (Type VSMR / Patent pending)

Type VSM ►

▲ Faster release (blow-off) and efficient cleaning of suction cup filters can be achieved by adding controlled compressed air to extra vacuum ports.

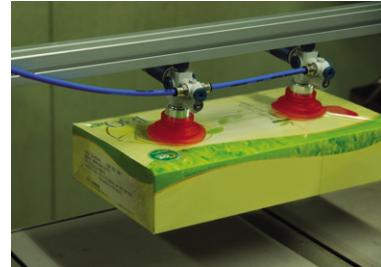

Series VSMR..

Max. vacuum level	: -90kPa (-26.57 inHg)
Max. flow rate	: 85.8 NL/min (3.03 scfm)
Supply air pressure	: 3~6 bar, max 7 bar (43.5~87psi, max 101.5psi)
Air consumption	: 20~32 NL/min (0.7~1.13 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ +80°C
Noise level	: 55~65 dBA

Main advantages

- Efficient individual and independent point-of-use vacuum.
- Extremely quick response.
- Multiple connection ports available
- Quick release system without release control valve.
- Maintains vacuum despite fluctuations and drops in air pressure.
- VMECA TWOFOLD SILENCER^{PT} assures low noise levels.
(about 30% lower than conventional silencer)

Order No.

A - Mark free	Excellent	-10°C ~ +100°C	Excellent	Very Good
PU - Poly Unethane	Excellent	0°C ~ +60°C	Excellent	Excellent
E - EPDM	Very Good	0°C ~ +150°C	Unsuitable	Excellent

• SUCTION CUPS FOR VACUUM SPEEDER VB Type (Bellows)

Features and Strengths

Particularly good for use on curved surfaces and for separating thin sheets of materials in stacks.
The bellows cup is very good at compensating for a degree of difference in level and curvature of the work piece, more angular and level compensation can be achieved by using other **Vtec** pad accessories.

Suitable for Handling

- Sheet Veneer
- Plastic sheets
- Paper Box Handling
- Thin Film sheets
- Cardboard Boxes and Electronic Components

Order No.

VACUUM
SPEEDER

• SUCTION CUPS FOR VACUUM SPEEDER

VOC Type (Oval Curve)

Features and Strengths

This cup is best suitable for handling long objects with flat or curved surfaces.

Specially, parallel to the surface of the object it has a thick and durable lip.

Suitable for Handling

- Long Objects with Flat
- Curved Surfaces
- Shaped Sheet Metal Panels
- Automotive Bumper

Order No.

VSMR 203 - PT8 .. VOC 35X 90 N - 38M

VACUUM
SPEEDER

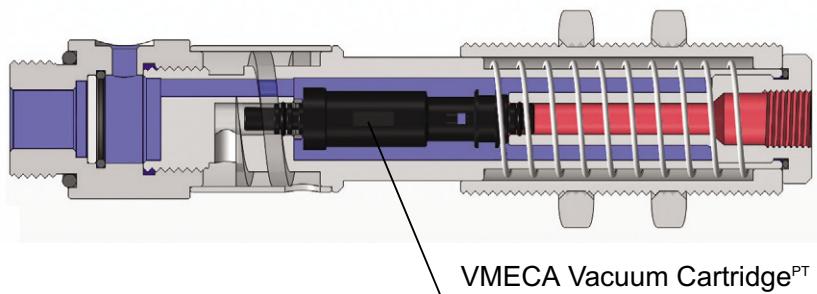

Series VCS 202..

Max. vacuum level	: -90kPa (-26.57 inHg)
Max. flow rate	: 41.3 NL/min (1.45 scfm)
Supply air pressure	: 4~6 bar, max 7 bar (58~87psi, max 101.5psi)
Air consumption	: 416 NL/min (14.6 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ +80°C
Noise level	: 55~65 dBA

Main advantages

- VMECA Cartridge^{PT} with silencer built into level compensator.
- High operational reliability despite fluctuating or low compressed-air pressure.
- Low air consumption (Save energy)
- Compensate for differences in height on the surface of the material.
- VMECA Vacuum Cartridge mounted close to work (Fast response time).
- Very Compact size.
- Easily mountable and interchangeable vacuum cartridge.

Order No.

VCS 202 - 18M 20

Measure unit : mm [inch]

Constructions

Features

- VMECA Vacuum speeder operates at 3~6bar(43.5~87 psi) air pressure and maintains vacuum -90 kPa (-26.5 inHg) in low pressure or fluctuating pressure situations.
- Extremely fast response (increased speed).
- VMECA Vacuum cartridge^{PT} with silencer built into the body of a level compensator.
- Small size and easy to mount.
- Low energy consumption and noise level.
- No maintenance expected or required.

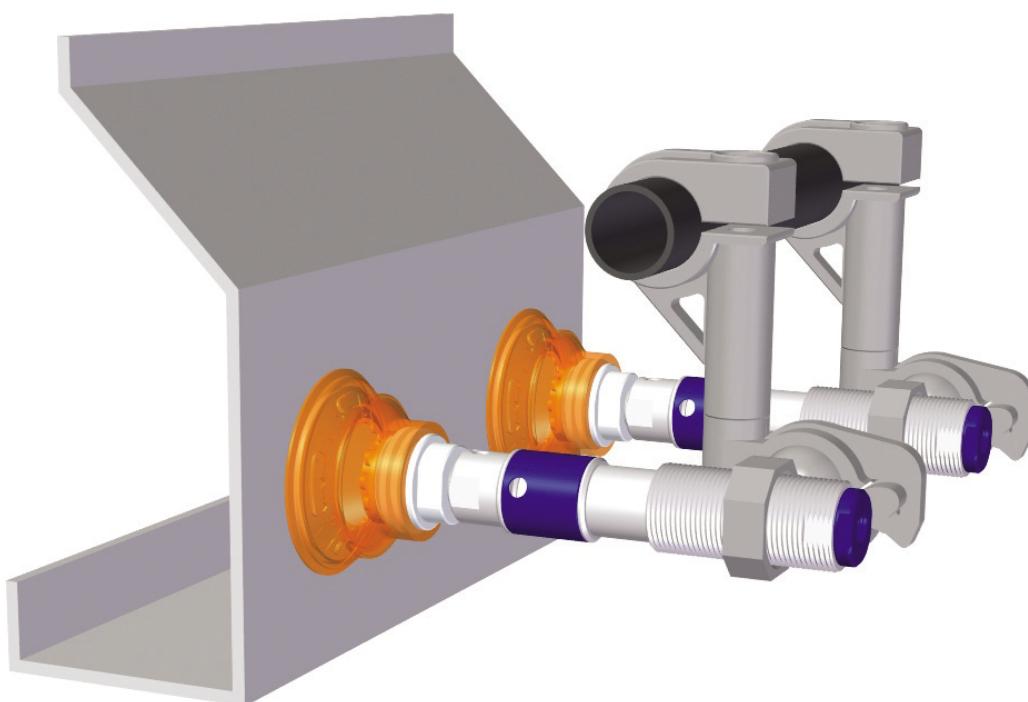

■ Vacuum Zone

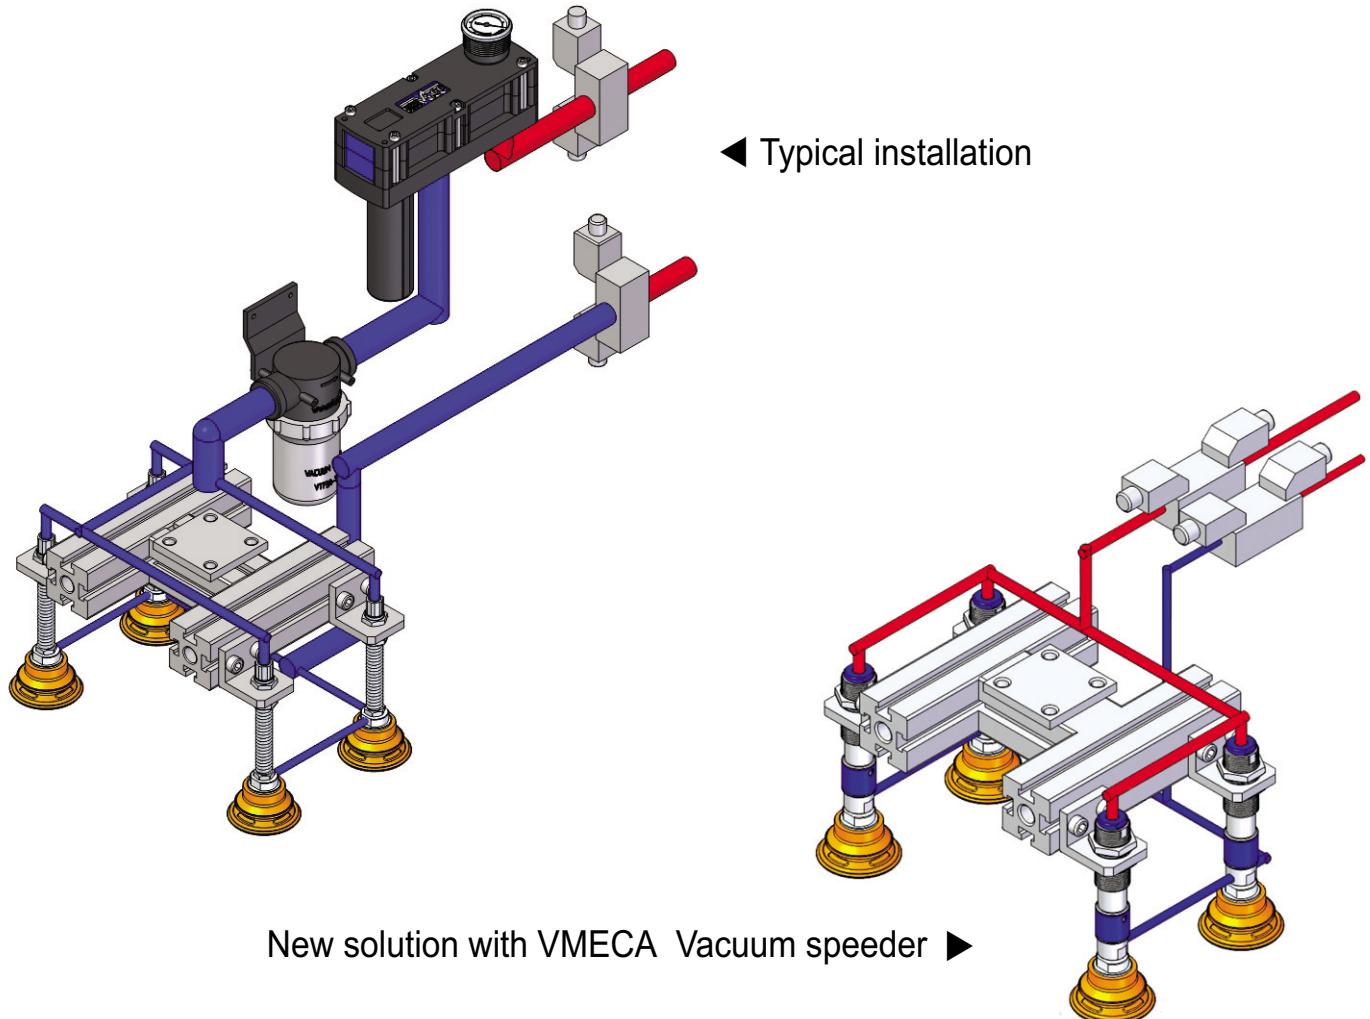

■ Compressed-air feed zone

The vacuum cartridge is built into the body of the level compensator. System plumbing is virtually eliminated and vacuum is created directly at the point of use. Quicker response and faster cycle times with minimum compressed air usage are the result. Additionally, the VMECA Vacuum Speeder offers all the height compensating and shock absorbing qualities of a conventional level spring.

VACUUM
SPEEDER

The VMECA Vacuum speeder offers the convenience of an extremely compact, point-of-use vacuum pump.

Features

- VMECA Vacuum Cartridge^{PT} with silencer built into the body of a level compensator.
- Point-of-use design eliminates system plumbing.
- Individual and independent vacuum improves safety and reliability of operation
- Low energy consumption.
- Fast response and cycle times - as much as 60% faster than typical, conventional ejectors.

VACUUM PUMPS

How to select the proper vacuum pump

Sealed system

For sealed system the capacity of the pump is determined by how fast the system can be evacuated to a certain vacuum level. This capacity is called the evacuation time of the pump and is normally specified in sec/l. This value is multiplied by the volume of the system in order to obtain the evacuation time to the desired vacuum level.

Non-sealed system

With non-sealed system (lifting of porous material) the case is different. To maintain the desired vacuum level the pump must have the capacity to pump away the air-leaking in by establishing the leaking flow ; it is possible, by reading the pump data, to find the right pump for the application in question. If the leakage occurs via a known aperture, the flow can be established according to the diagram. When the leakage occurs through a porous material or in an unknown way, the flow can be established by a test with a vacuum pump. The pump is connected to the system and the obtained vacuum level is read. (It should be at least -20kPa)

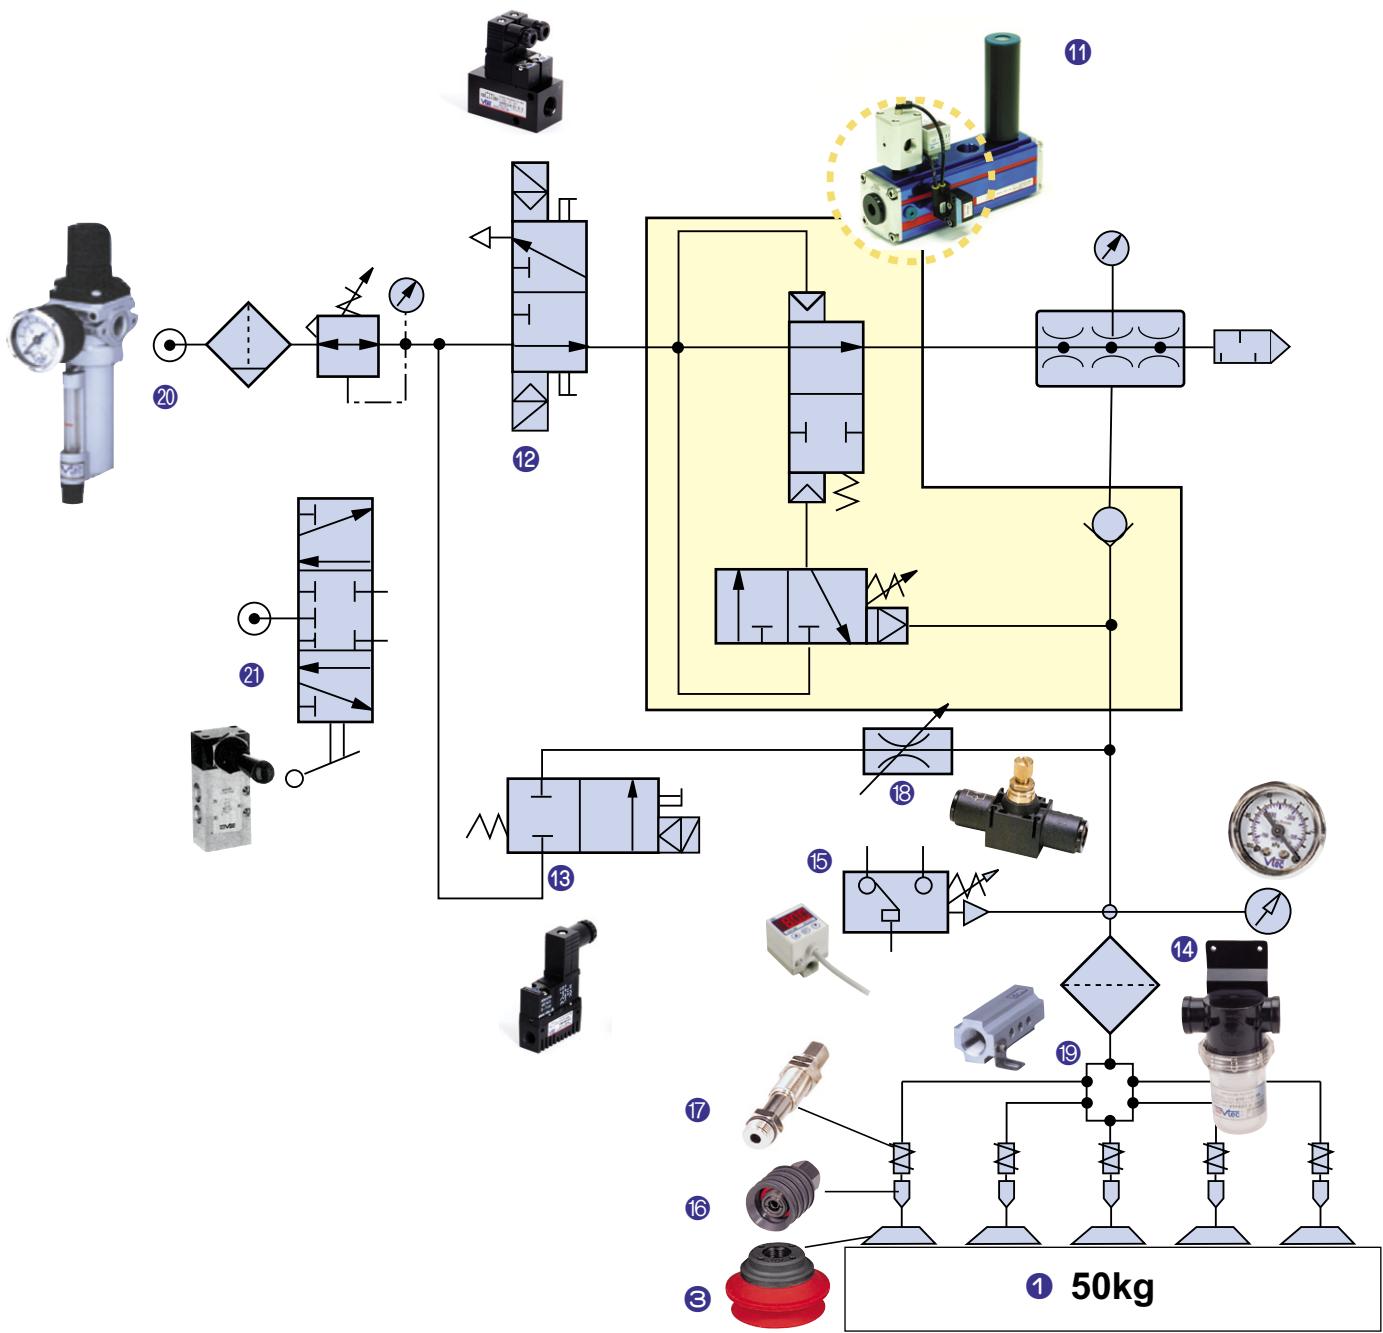

AS-KIT (Air saving system)

Electrically driven, mechanical vacuum pumps normally work during the whole working period and the vacuum requirements are controlled by a valve on the vacuum side. In system with compressed air-driven vacuum pumps it is often possible to save a lot of energy. As these pumps have a faster reaction time (fast start-up) the pump can be shut off when the vacuum is no longer needed. Many pumps can be delivered with an Air saving system as option.

The example for vacuum system

EX) If, you have to move in packing box (50kg) with suction cup and suction time-within 0.3sec using to the condition as follows :

Condition : air pipe length=3m, air pipe(hose) inner diameter=6mm, Quantity of suction cup ; 5 pcs
What is proper vacuum pump & suction cup model?

① Moving weight (kg)	: 50
② Suction time	: 0.3 second
③ Selected suction cup	: VB75(B) Pu-12F
④ Suction cup material	: PU
⑤ Suction cup quantity (Pcs)	: 5
⑥ Diameter of suction cup (mm)	: 75
⑦ Air vacuum hose length (m)	: 3
⑧ Inner diameter of air hose (mm)	: 6
⑨ Volume of suction cup (Nl)	: 0.55
⑩ Volume of vacuum air hose (Nl)	: 0.085
⑪ Selected vacuum Pump	: VTM 50L - 1834 - AS
⑫ Air supply control valve	: VMS14D-3-2
⑬ Vacuum release control valve	: VMS18D-3-2
⑭ Selected vacuum filter (You can to be select to size of a vacuum filter according to capability of infected material.)	: VTF 34 - 2
⑮ Vacuum switch (transiton singal for next movement)	: VP20C..
⑯ Ball joint (to use in curve or uneven objects)	: BJ 12
⑰ Level spring (to use to compensater differences in level)	: L1230T
⑱ Needle valve (vacuum level controlling valve)	
⑲ Vacuum manifold	: VTDC34-14X5
⑳ Air filter / regulator (remove to dust, water, rust, etc.)	
㉑ Hand valve (using to manual)	

▶ HOW TO SELECT SUCTION CUP SIZE

$$D=113 \times \sqrt{\frac{MXN}{UXS}} = 113 \times \sqrt{\frac{50 \times 2}{60 \times 5}} = 65.2 \text{ mm}$$

D = diameter size of suction cup (mm)

M = weight (kg)

U = vacuum level (-kPa, %)

N = safety factor (2)

S = quantity of suction cup

★ VB75 = (You are desirable to select a little big size suction cup than the actual they size)

▶ WHAT IS PROPER SUCTION CUP SIZE

$$VB75 (110\text{cm}^3) = 0.11\ell \times 5 (\text{Pcs}) = 0.55\ell$$

(※ Please refer to page 18.19 for the Volume of suction cup)

- 0.55 ℓ (Quantity of vacuum pad : 5 Pcs)

▶ AIR PIPE, SUCTION CUP & VACUUM FILTER

$$\bullet V = \frac{\pi X d^2 \times L}{4} \times \frac{1}{1000} = \frac{3.14 \times 0.6^2 \times 300}{4} \times \frac{1}{1000} \doteq 0.085\ell$$

V = Capacity (liter)

d = inside diameter of air pipe (cm)

L = the length of air pipe (cm)

- Filter (VTF34-2) : 160cm³ = 0.16ℓ

- Needed vacuum capacit = the capacity of suction cup + the capacity of air pipe + the vacuum filter

$$0795\ell = 0.55\ell + 0.085\ell + 0.16\ell$$

▶ THE SELECTION OF VACUUM PUMP

$$VTM25L : 0.795(\ell) \times 0.66 = 0.53$$

$$VTM50L : 0.795(\ell) \times 0.33 = 0.27$$

$$VTM75L : 0.795(\ell) \times 0.248 = 0.20$$

$$VTM100L : 0.795(\ell) \times 0.166 = 0.13$$

★ VTM50L or VTM75L

Because when there is a vacuum leak from the work piece or the piping and a drop in vacuum pressure which causes the air pressure drop.

AS - KIT

Air Saving

Has anyone ever told you that air is free? Well, think again because compressed air still uses energy and costs money to use it. VMECA / VTEC's ongoing principle on saving air and giving you the highest performance have always been our standard.

Air Saving Kit

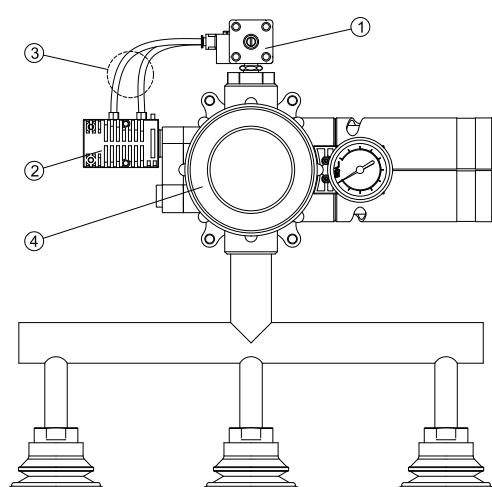

VMECA / VTEC have always offered various ranges of compressed air-driven vacuum pumps in the market.

VMECA / VTEC ensures the best solutions to customers by offering the most efficient products in the market.

VMECA / VTEC's Air Saving-Kit(AS-Kit) effectively prevents compressed air loss. Air Saving-Kit is a pneumatic control system that cuts off the vacuum pump once the desired vacuum level has been achieved, thus minimizing the energy (compressed air) consumption of the vacuum pump.

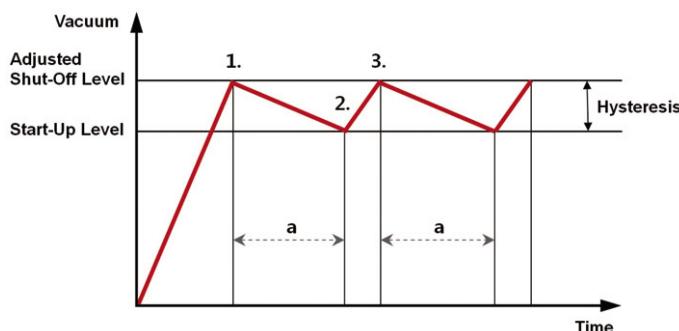

In case the vacuum level drops below the working level (required vacuum level), then the Air Saving-Kit reactivates the vacuum pump allowing for safe handling of product. The Air Saving-Kit is the most suitable in sealed systems (applications).

AS - Kit - Turtle Pump

- ① Pneumatic vacuum switch, VPS-01 NC
- ② Pneumatic Air ON/OFF Valve, 1/4 "
- ③ Hose of Poly-Urethane, D=4/1.5
- ④ Turtle Vacuum pump, Non-return type

Function

A vacuum control valve shuts off the flow of compressed air to the pump when the pre-set vacuum level is reached (1). The vacuum level is set by a screw. Because of minor leakage in a vacuum system the vacuum level drops and after a while the start up level of the valve is reached (2). Then the pump will start and work until the shut off level is reached again (3), etc. (the section (a) is possible to be changed depending on the level of airtight.)

TURTLE PUMPS

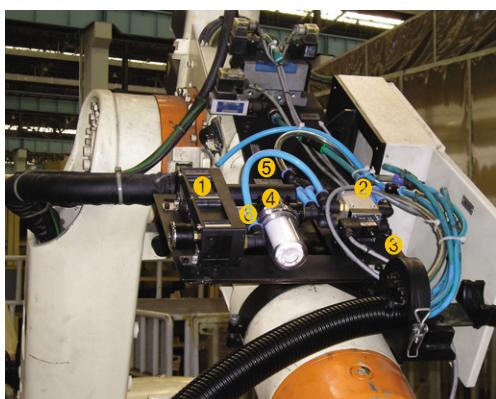

Effective cost saving with VMECA improved system

VMECA® Turtle pump with integral vacuum filter and silencer can be combined with the optional vacuum On/Off control valve, vacuum release valve and vacuum switch to create an optimal vacuum solution for many applications. The VMECA® Turtle pump and optional components, due to the compact design and size, can be mounted close to the point of use reducing system volume and maintenance while improving cycle time.

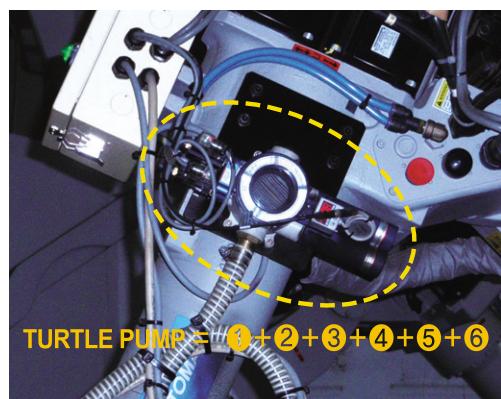

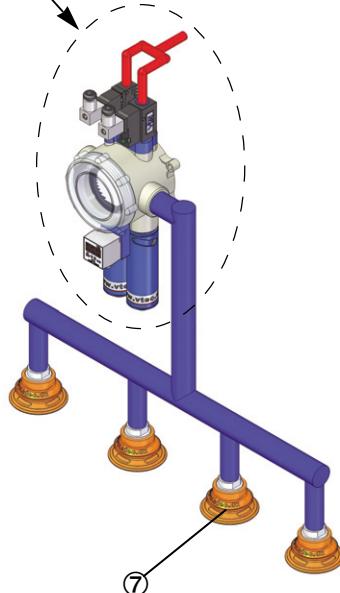

- ① Vacuum pump
- ② Air control valve
- ③ Vacuum release control valve
- ④ Vacuum filter
- ⑤ Vacuum switch
- ⑥ Vacuum pipe line
- ⑦ Suction cup

Comparison of Evacuation time at different Vacuum levels

Comparison of Vacuum level at different feed pressure

Specifications subject to change without notice.

Enable to decide the series of VMECA TURTLE PUMP the performance you need.

MIDI 3031 Series

► VTC Series

High vacuum level (-92 kPa) at **low compressed air pressure** (3~6 bar).

High vacuum flow rate to compensate for fluctuating or low compressed air pressure.

Suitable for sealed system applications such as lifting metal sheets or glass plate.

► VTCL Series

Extra high vacuum flow rate and suitable for **non-sealed system** applications.

Vacuum level of -75 kPa at a compressed air pressure of 6 bar.

Enable to decide the series of VMECA TURTLE PUMP the performance you need.

MIDI 3032 Series

► **VTC Series**

High vacuum level (-92 kPa) at **low compressed air pressure** (3~6 bar).

High vacuum flow rate to compensate for fluctuating or low compressed air pressure.

Suitable for sealed system applications such as lifting metal sheets or glass plate.

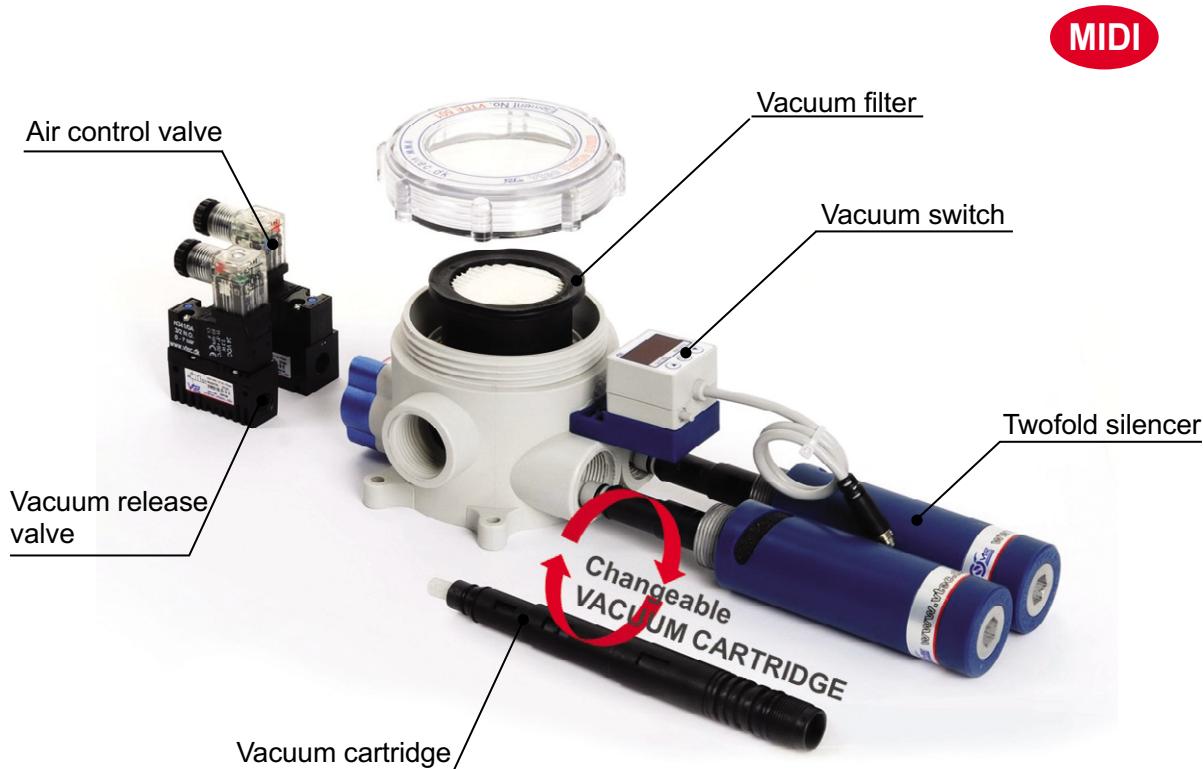

► **VTCL Series**

Extra high vacuum flow rate and suitable for **non-sealed system** applications.

Vacuum level of -75 kPa at a compressed air pressure of 6 bar.

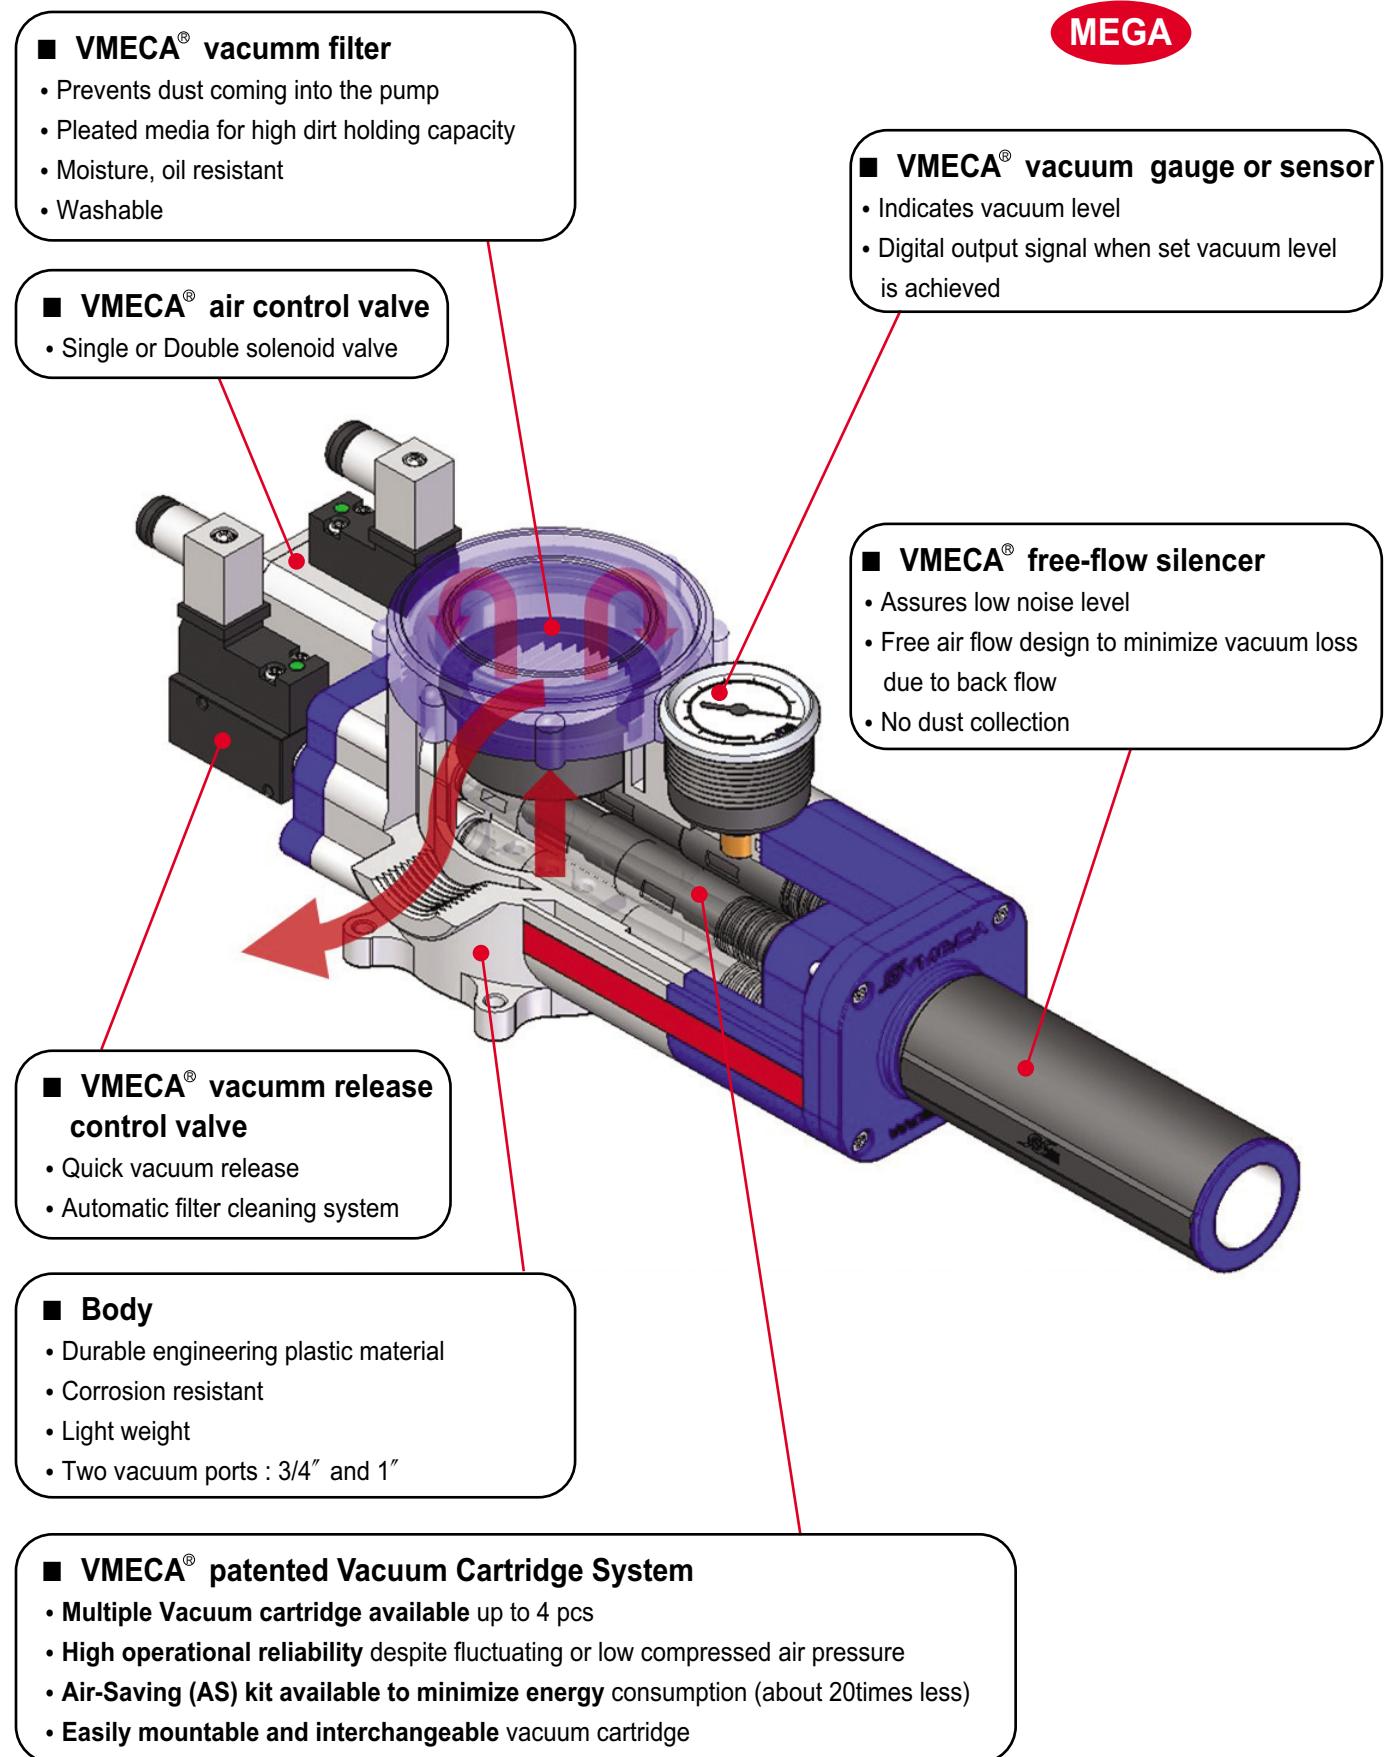

Structure and Main advantage of Midi Turtle Pump

The VMECA Turtle Pump is recommended for applications requiring a compact, complete and easy to install, minimal maintenance.

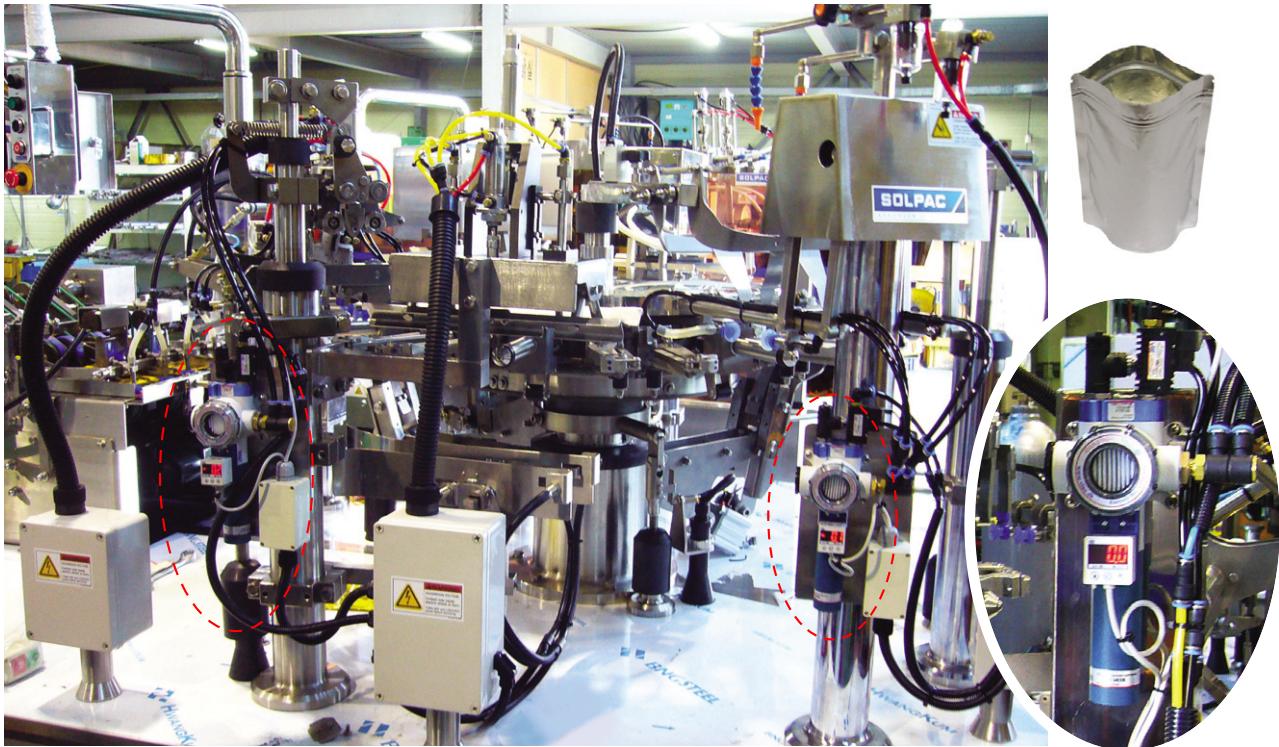

- ✓ Patented design
- ✓ All-in-one compact design
- ✓ Light weight
- ✓ Multi vacuum ports
- ✓ Vacuum filter self cleaning system
 - Eliminates periodic maintenance
- ✓ VMECA Vacuum Cartridge
 - High vacuum flow rate
 - High operational reliability despite fluctuating or low compressed air pressure
- ✓ Twofold silencer
 - Designed specially assure low noise level

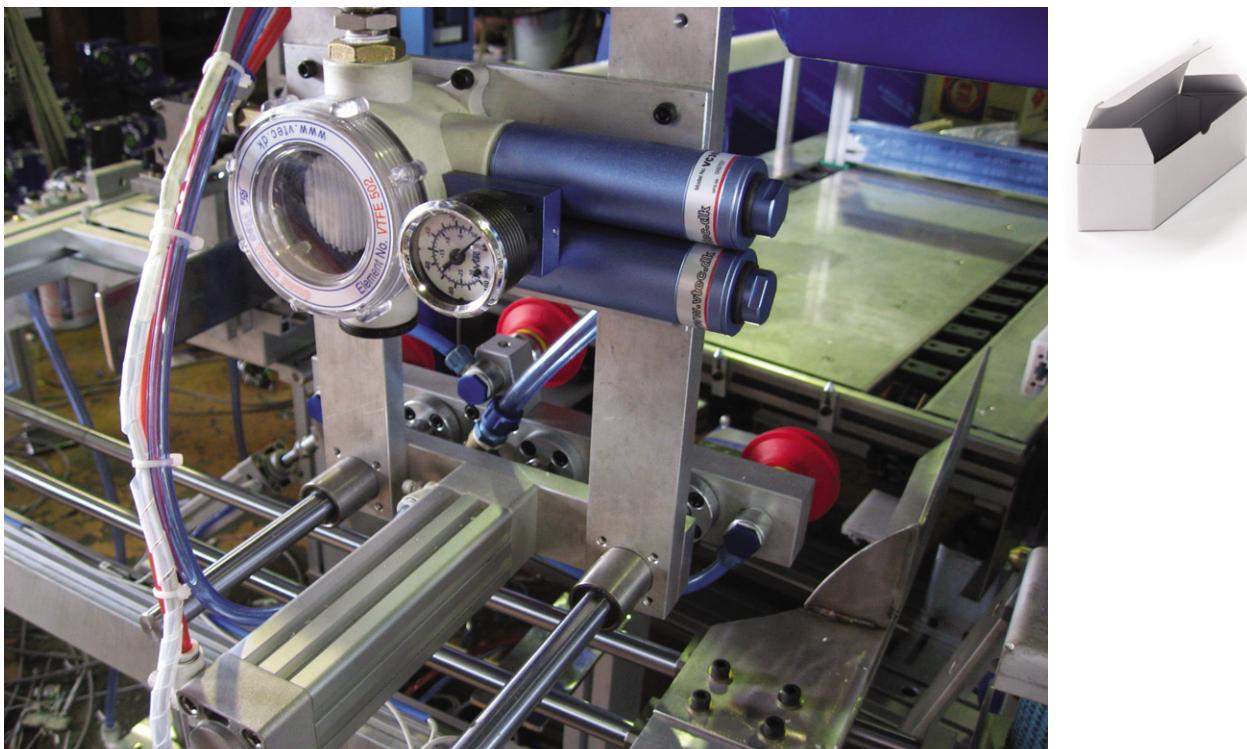

Structure and Main advantage of Mega Turtle Pump

APPLICATIONS

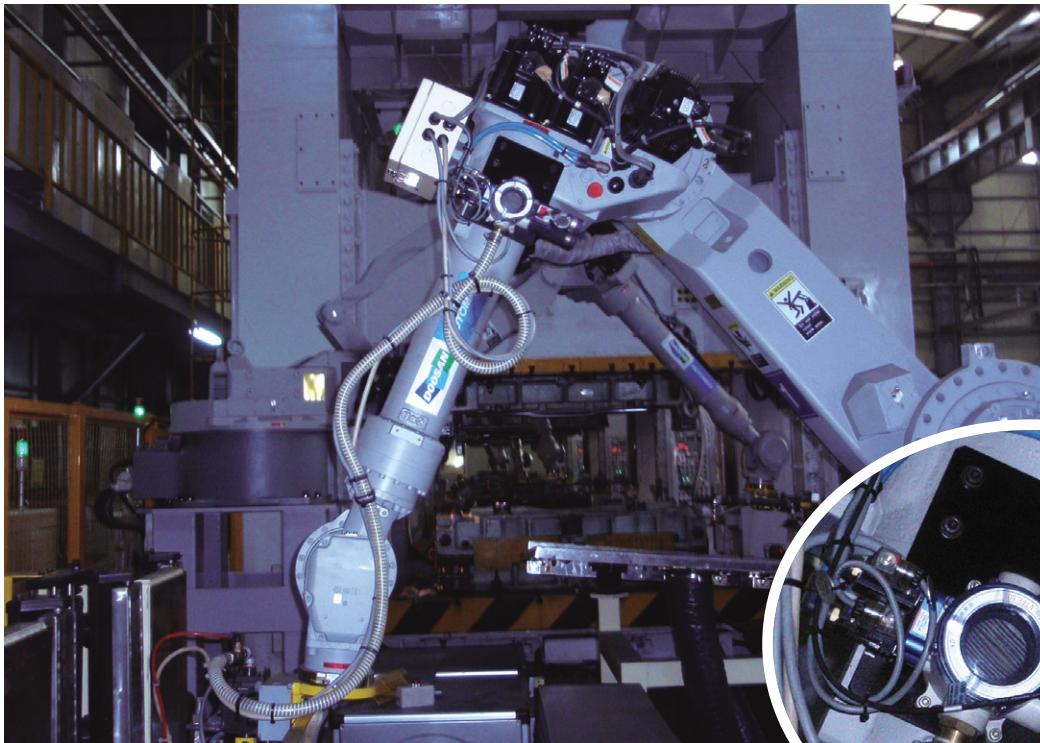

▲ Rotary Packaging machine (VTC3031)

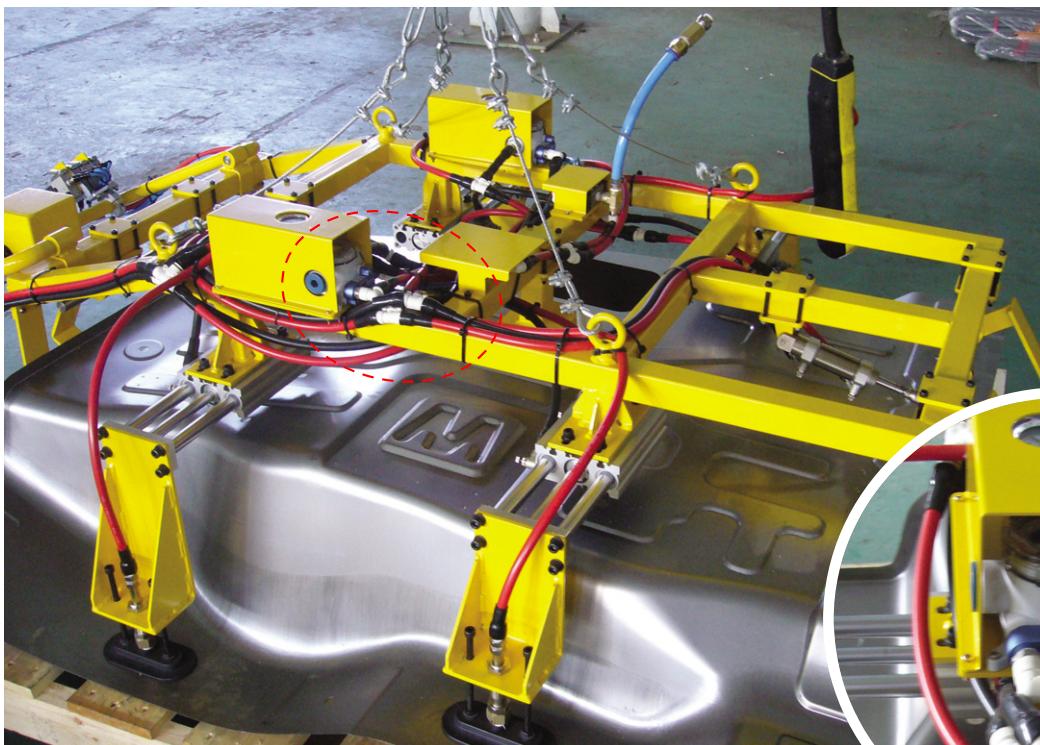

▲ Packaging machine : Carton boxes opening (VTC3032)

APPLICATIONS

▲ Robot Arm : Automobile Press stamping line (VTC3031)

▲ Automobile Fuel Tank lifting (VTC3031 X 2 pcs)

VTC 3031/3021 Series

Max. vacuum level	: -93 kPa (-27.46 inHg)
Max. flow rate	: 341 NL/min (12.04 scfm)
Supply air pressure	: 3 ~ 6 bar, max 7 bar (43.5~87 psi, max 101.5 psi)
Air consumption	: 97~152 NL/min (3.43~5.37 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 50~60 dBA

Main advantages

- Patented design.
- High operational reliability despite fluctuating or low compressed-air pressure.
- Integrated high dirt holding capacity pleated filter.
- VMECA Twofold Silencer™ assures low noise levels.
- Optional Air-Saving(AS) kit available to minimize energy consumption.
- Optional factory installed Air control/Vacuum release valves and Vacuum switch available.
- Compact size and light weight.
- Easily mountable and interchangeable vacuum cartridge.

Order No.

VTC Series

Max. vacuum level	: -93 kPa (-27.46 inHg)
Max. flow rate	: 1,364 NL/min (48.17 scfm)
Supply air pressure	: 3 ~ 6 bar, max 7 bar (43.5~87 psi, max 101.5 psi)
Air consumption	: 194~608 NL/min (6.85~21.47 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 60~65 dBA

Main advantages

- Patented design.
- High vacuum flow and vacuum level.
- High operational reliability despite fluctuating or low compressed-air pressure.
- Integrated high dirt holding capacity pleated filter.
- Automatic vacuum filter cleaning system.
- Compact size and light weight.
- Minimize energy consumption with AS-KIT (Air-saving kit)
- Air control / Vacuum release valves and Vacuum switch available.
- Easily mountable and interchangeable vacuum cartridge
- Long life time.

VTCL - Series

Max. vacuum level	: -75 kPa (-22.15 inHg)
Max. flow rate	: 1,448 NL/min (51.13 scfm)
Supply air pressure	: 4 ~ 6 bar, max 7 bar (58~87 psi, max 101.5 psi)
Air consumption	: 140~416 NL/min (4.94~14.69 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 60~65 dBA

Main advantages

- Patented design.
- High vacuum flow and vacuum level.
- High operational reliability despite fluctuating or low compressed-air pressure.
- Integrated high dirt holding capacity pleated filter.
- Automatic vacuum filter cleaning system.
- Compact size and light weight.
- Minimize energy consumption with AS-KIT (Air-saving kit)
- Air control / Vacuum release valves and Vacuum switch available.
- Easily mountable and interchangeable vacuum cartridge
- Long life time.

▲ BUS Cable

Order No.

V-PUMPS

Enable to decide the series of VMECA V-PUMP the performance you need.

► VS Series

High vacuum level (-93 kPa) at low compressed inlet air pressure (3~6 bar).

High vacuum flow rate to compensate for fluctuating or low compressed air pressure.

Suitable for sealed system applications such as lifting metal sheets of glass plate.

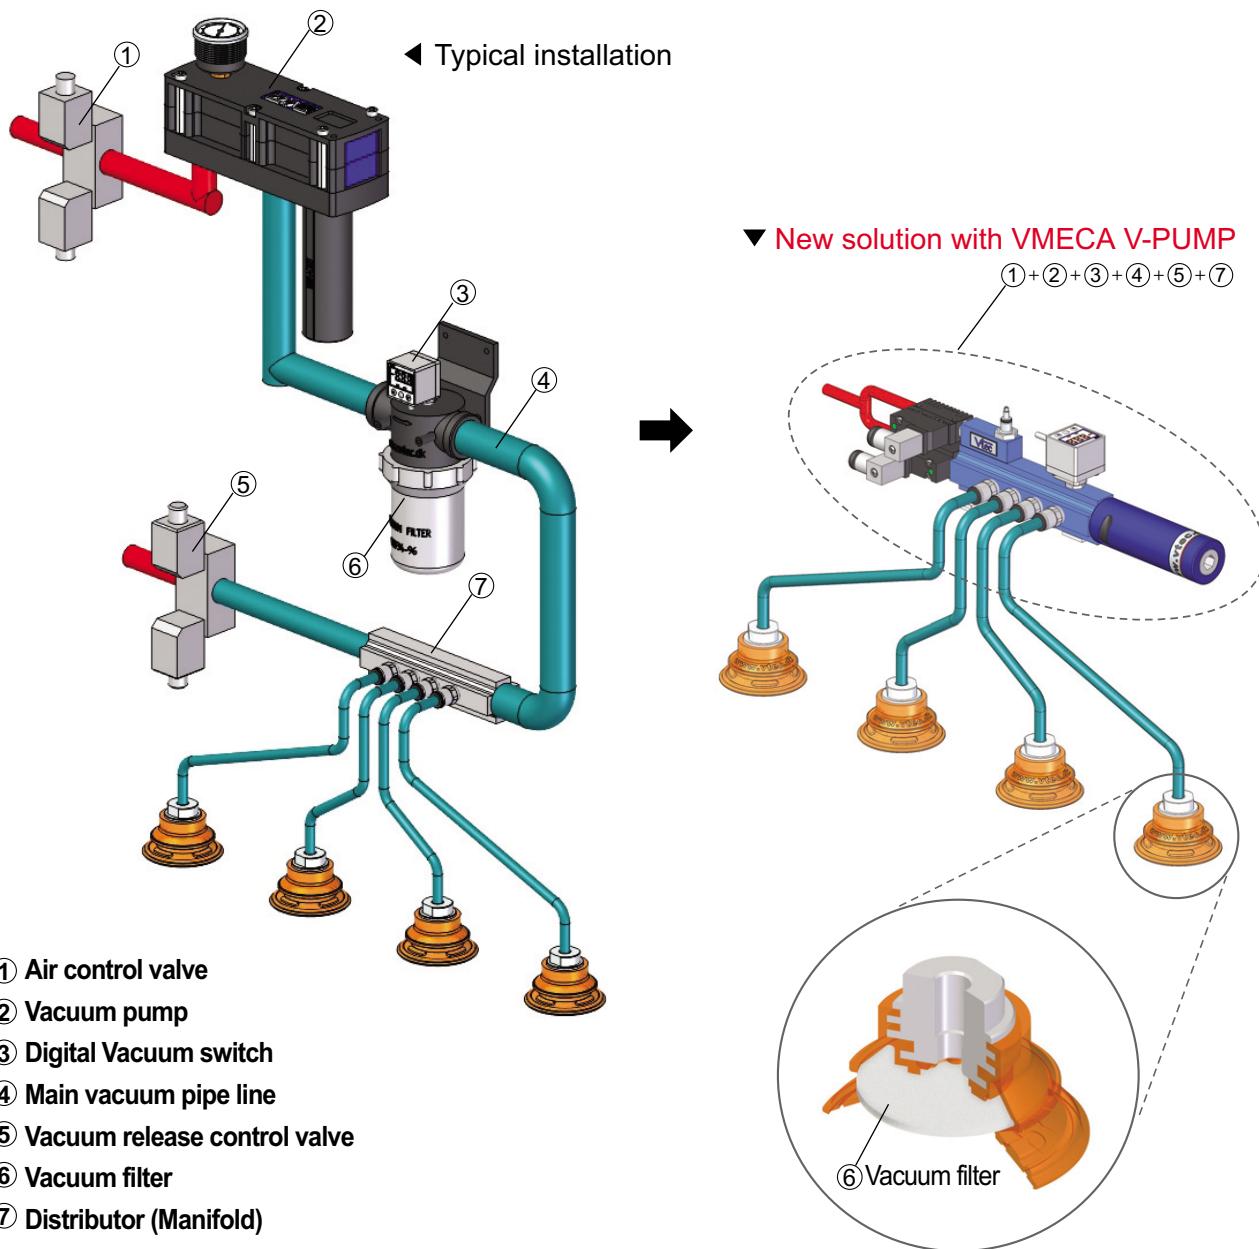

► VLS Series

Vacuum level (-75 kPa) at general inlet air pressure (6 bar)

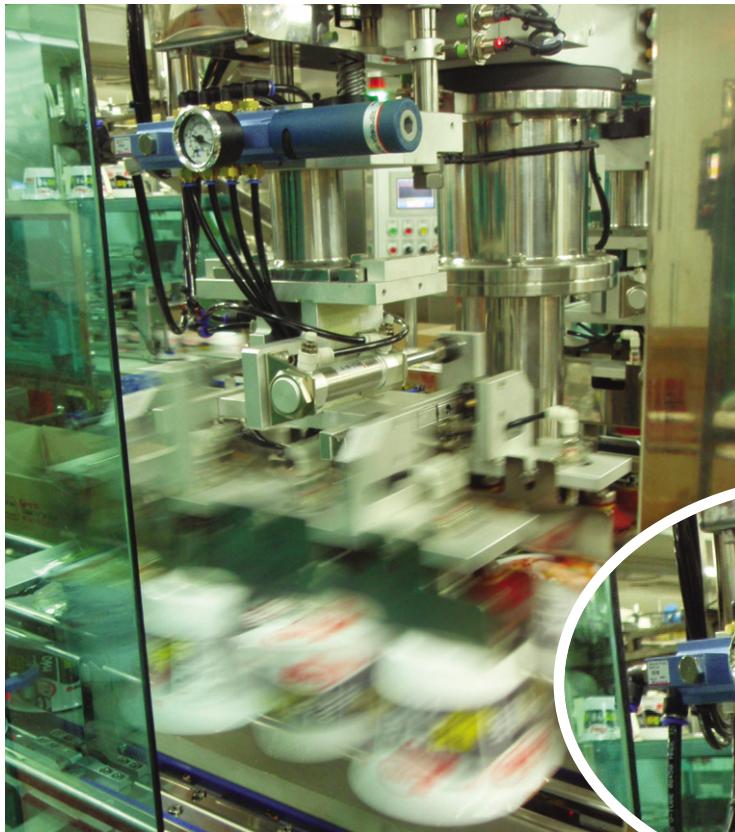

Extra high vacuum flow rate and suitable for non-sealed system application.

The VMECA® V-PUMP's features

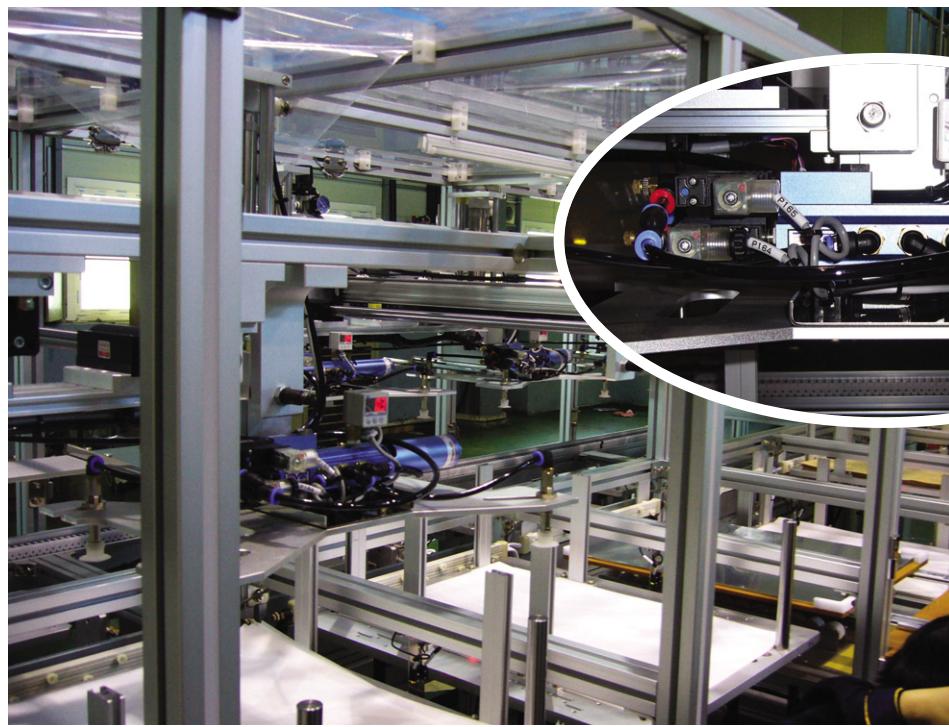

- Multiple connection alternatives up to 8 ports.
- Minimum installation space.
- Lower capital cost.
- Faster response time.
- Easy to install.
- Easy to maintain and repair.
- Long life time.

APPLICATIONS

▲ Cup noodle Packaging machine (VS148..)

▲ Thin Film loading (VS146..)

VS - Series

Max. vacuum level	: -93 kPa (-27.46 inHg)
Max. flow rate	: 341 NL/min (12.04 scfm)
Supply air pressure	: 3 ~ 6 bar, max 7 bar (43.5~87 psi, max 101.5 psi)
Air consumption	: 97~152 NL/min (3.43~5.37 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 50~60 dBA

Main advantages

- High operational reliability despite fluctuating.
- Quick response time.
- VMECA Twofold Silencer™ assures low noise levels.
- Easy to distribute vacuum. (Multiple connection alternatives up to 9 ports.)
- Optional Air-Saving(AS)kit available to minimize energy consumption.
- Optional factory installed air control/vacuum release valves and vacuum switch available.
- Easily mountable and interchangeable vacuum cartridge.

Order No.

MD-PUMPS

Enable to decide the series of VMECA MD-PUMP the performance you need.

► MD Series

High vacuum level (-93 kPa) at low compressed inlet air pressure (3~6 bar).

High vacuum flow rate to compensate for fluctuating or low compressed air pressure.

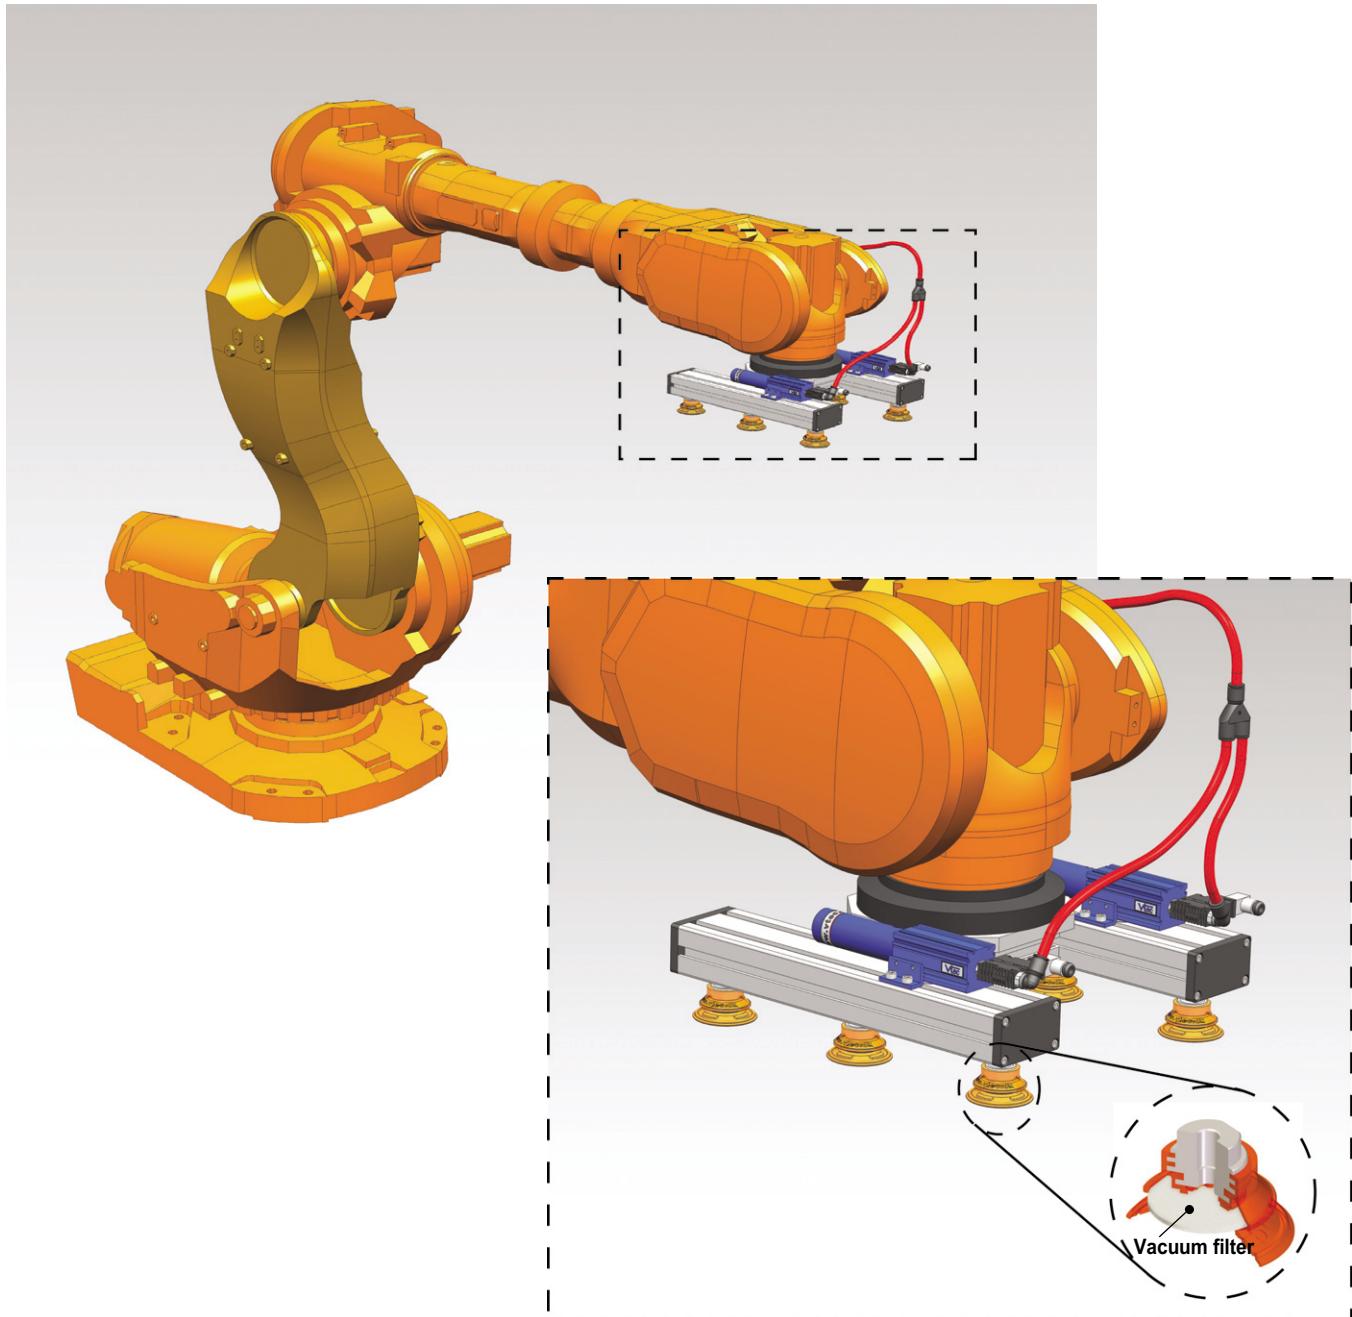

Suitable for sealed system applications such as lifting metal sheets of glass plate.

► MDL Series

Vacuum level (-75 kPa) at general inlet air pressure. (6 bar)

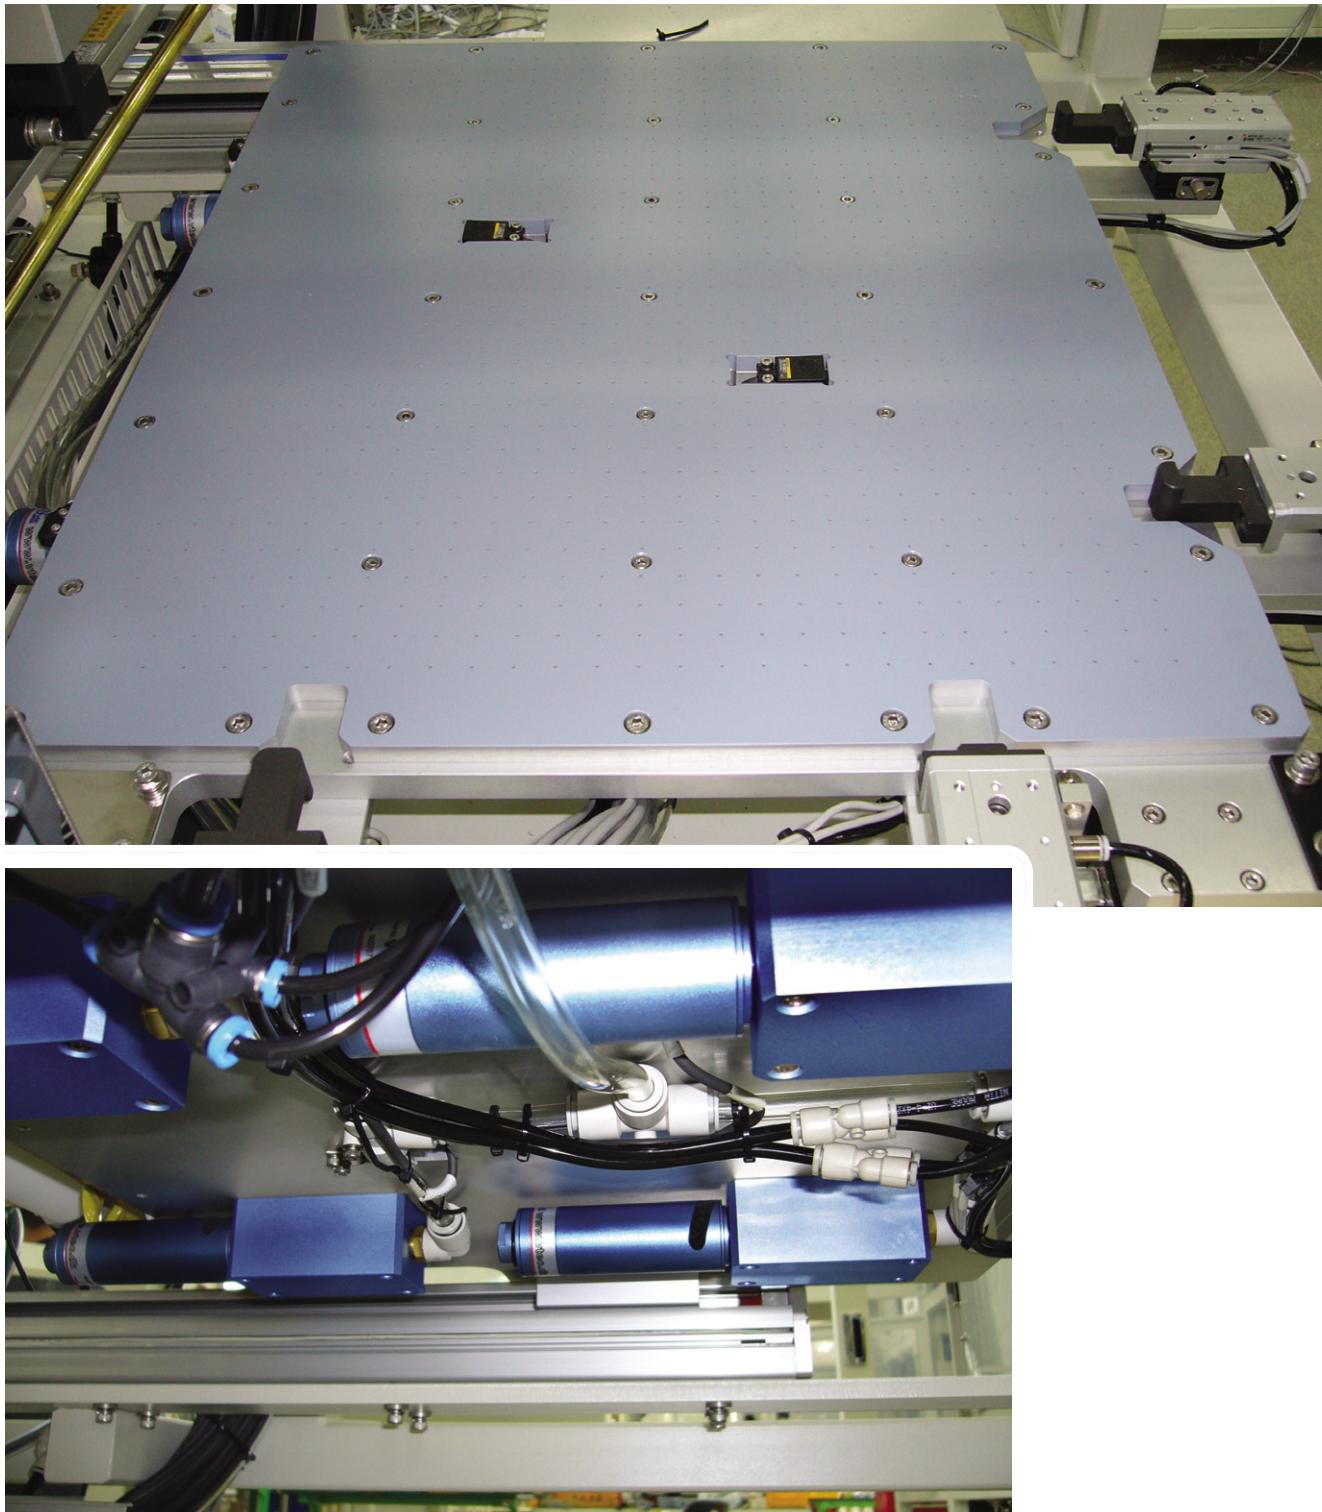

Extra high vacuum flow rate and suitable for non-sealed system application.

APPLICATIONS

Lightweight design of the VMECA MD-PUMP reduces the robot size requirement through direct mount on a robot-controlled gripper and improves the production time mounted close to the point of use.

APPLICATIONS

▲ Circuit Board holding plate

MD-Series

Max. vacuum level	: -93 kPa (-27.46 inHg)
Max. flow rate	: 341 NL/min (12.04 scfm)
Supply air pressure	: 3 ~ 6 bar, max 7 bar (43.5~87 psi, max 101.5 psi)
Air consumption	: 97~152 NL/min (3.43~5.37 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 50~60 dBA

Main Advantages

- Located at or near the point of use thus reducing system volume, increase and reducing cycle time
- Compact in size and light weight
- Maintain vacuum despite fluctuations and drops in air pressure
- VMECA TWOFOLD SILENCER™ assures low noise levels (about 30% lower than conventional silencer)
- Adjustable exhaust direction
- Optional Air-saving kit (AS-KIT) available to minimize energy consumption.
- Optional factory installed air control / vacuum release valves and digital vacuum switch available.
- Easily mountable and interchangeable vacuum cartridge (save the maintenance time)

Order No.

PREMIUM PUMPS

Choose the VMECA PREMIUM PUMP that is right for your application.

► PM Series

High vacuum level (-93 kPa) at low compressed air pressure (3~6 bar).

High vacuum flow rate despite fluctuating or low compressed air pressure.

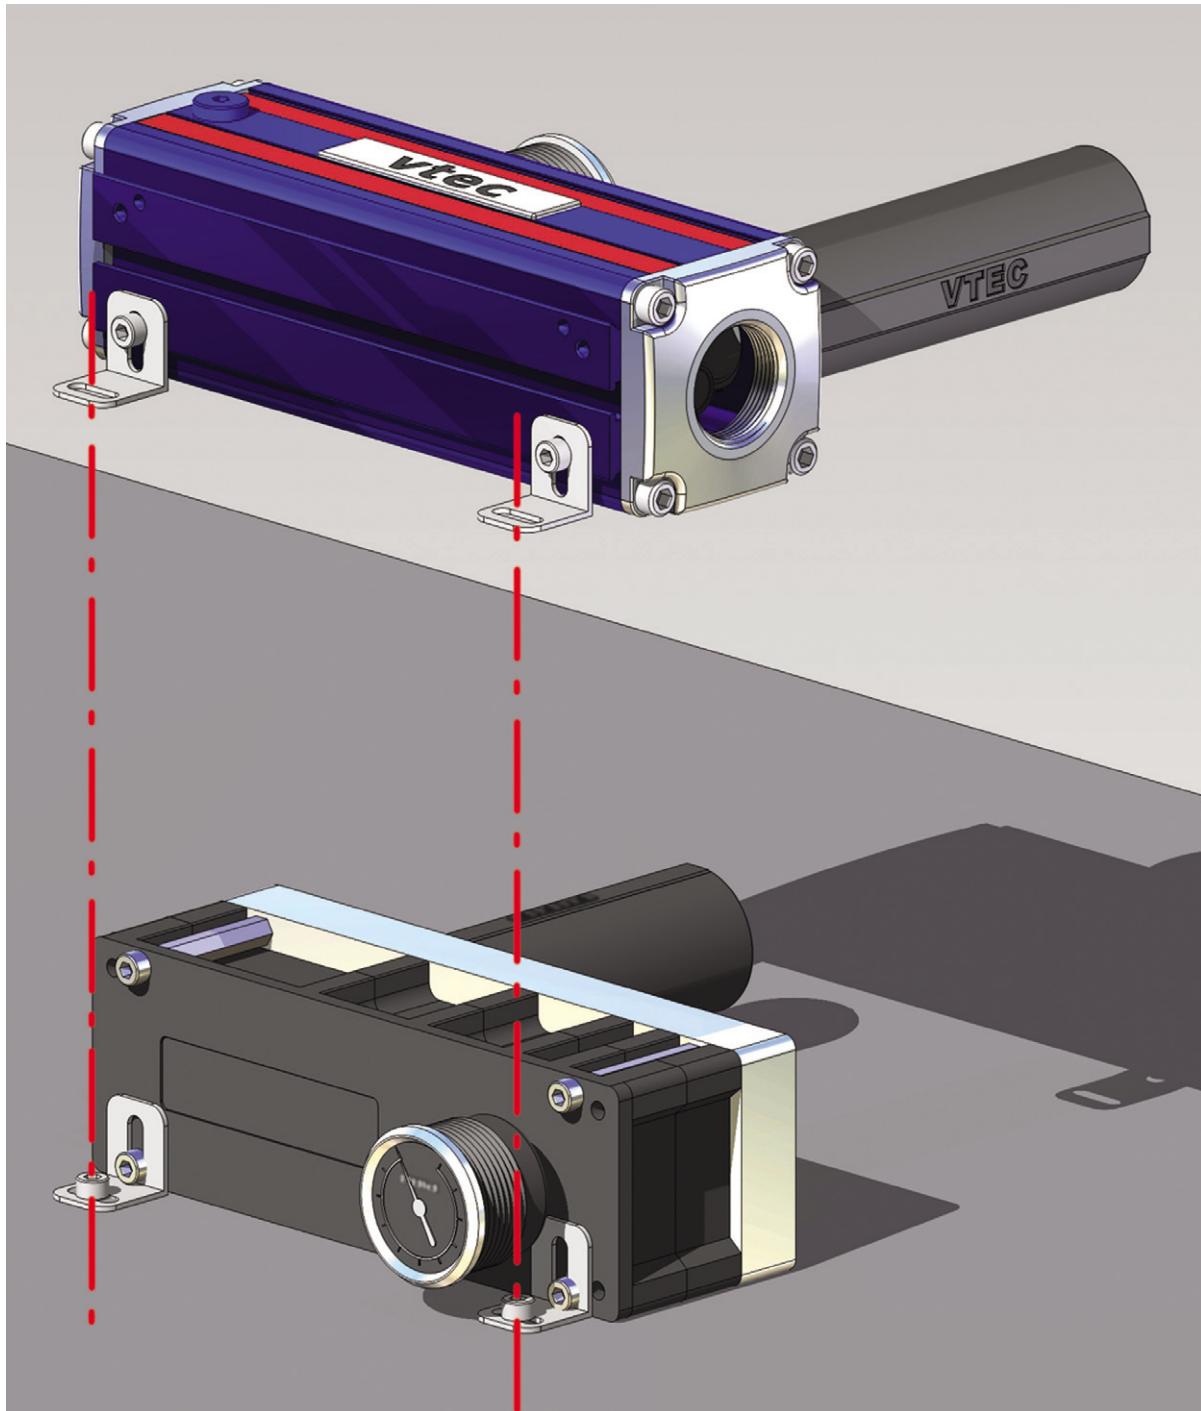

Suitable for sealed system applications such as lifting metal sheets or glass plate.

► PML Series

Extra high vacuum flow rate and suitable for non-sealed system applications.

Vacuum level of -75 kPa at a compressed air pressure of 6 bar.

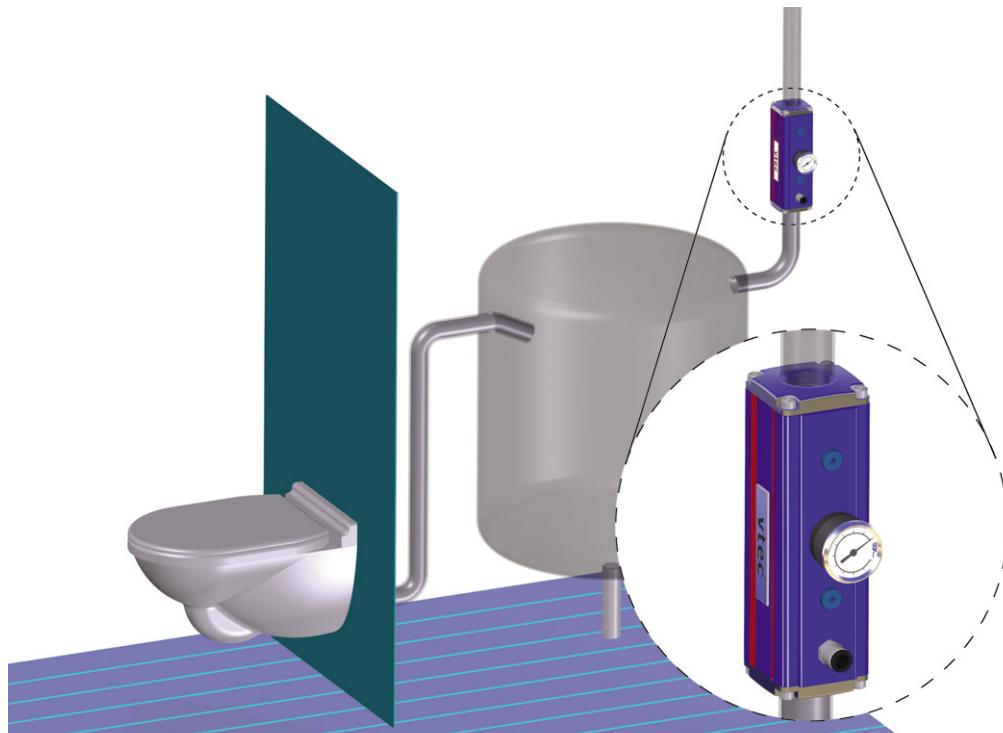

APPLICATIONS

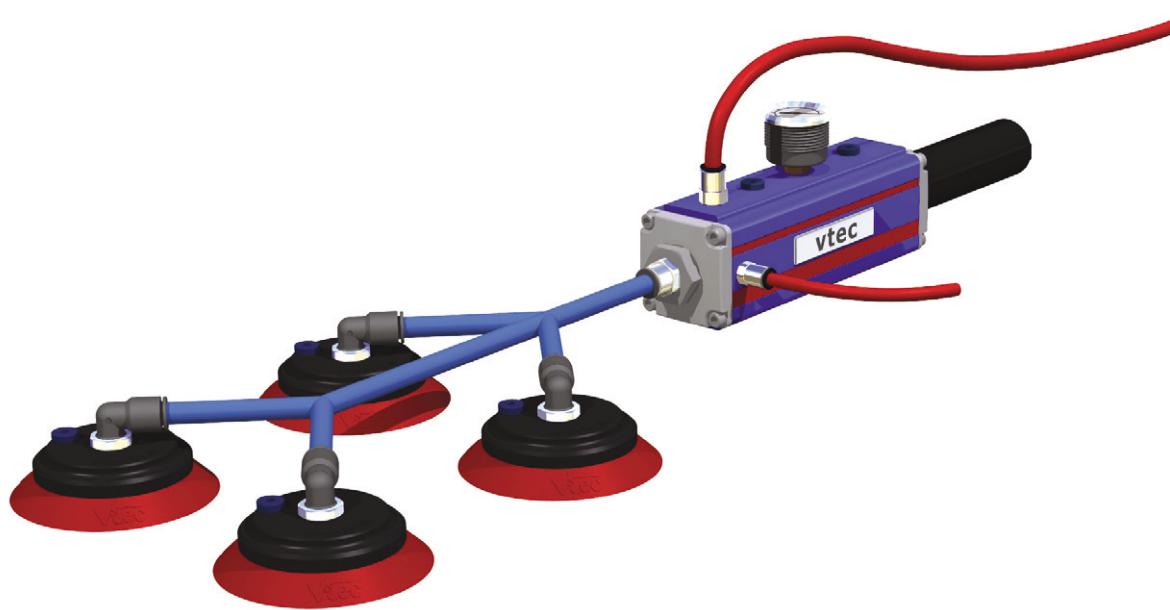

VACUUM
PUMPS

The VMECA PREMIUM VACUUM PUMP can directly replace a Classic Vacuum Pump without changing mounting holes or brackets.

APPLICATIONS

The VMECA PREMIUM VACUUM PUMP can be mounted directly inline to save space and is suitable for applications requiring high suction flows or evacuation of large volumes of air (i.e. vacuum chamber)

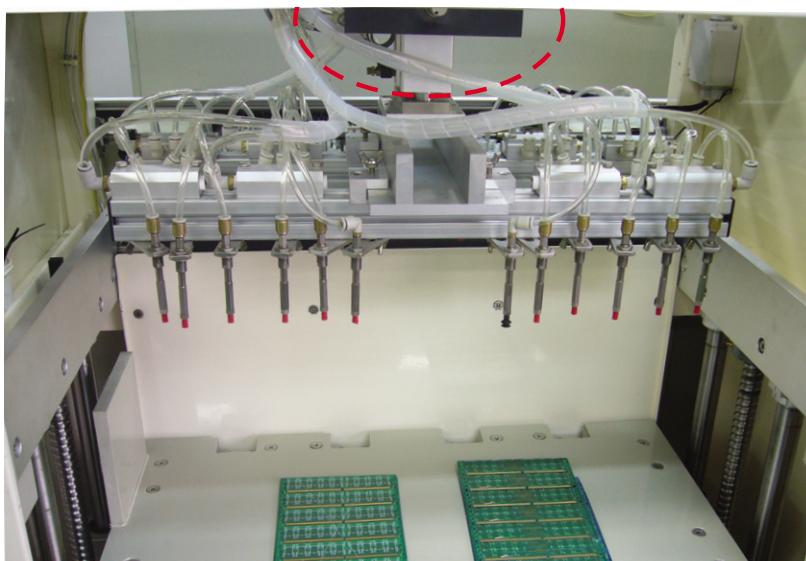

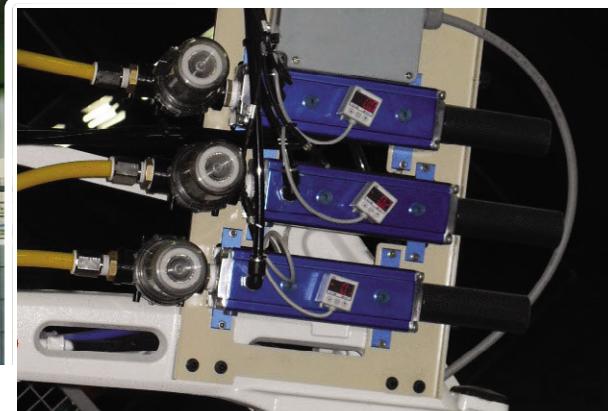

Despite fluctuations and drops in air pressure, the PREMIUM PUMP maintains a high flow rate along with a high and stable vacuum level eliminating lost or interrupted cycles.

This pump is excellent for non-sealed system applications or where large suction cups are used.

APPLICATIONS

▲ Robot Arm

▲ Circuit board roading

VACUUM
PUMPS

◀ Vacuum conveyor

PM-Series

Max. vacuum level	: -93 kPa (-27.46 inHg)
Max. flow rate	: 341~1364 NL/min (12.04~48.17 scfm)
Supply air pressure	: 3 ~ 6 bar, max 7 bar (43.5~87 psi, max 101.5 psi)
Air consumption	: 97~608 NL/min (3.43~21.47 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 60~65 dBA

Main Advantages

- Maintains vacuum despite fluctuations and drops in air pressure.
- Various connection ports available.
- Fast evacuation time.
- Optional Air-Saving Kit (AS-KIT) available to minimize energy consumption.
- Optional factory installed air control / vacuum release valves and digital vacuum switches available.
- Strong aluminum body.
- Easily mountable and maintainable with interchangeable vacuum cartridge.

Order No.

* Remark : Choose the 'A' body type (Vacuum port on side) for blowing function.

PML-Series

Max. vacuum level	: -75 kPa (-22.15 inHg)
Max. flow rate	: 362~1448 NL/min (12.78~51.14 scfm)
Supply air pressure	: 4 ~ 6 bar, max 7 bar (58~87 psi, max 101.5 psi)
Air consumption	: 70~416 NL/min (3.43~21.47 scfm)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 60~65 dBA

Main Advantages

- Large vacuum flow rate yet low air consumption.
- Various connection ports available.
- Fast evacuation time.
- Optional Air-Saving Kit (AS-KIT) available to minimize energy consumption.
- Optional factory installed air control / vacuum release valves and digital vacuum switches available.
- Strong aluminum body.
- Easily mountable and maintainable with interchangeable vacuum cartridge.

Order No.

KEYBOARD PUMPS

Mini Keyboard Pump

Max. vacuum level	: VKX pump -92 kPa (-27.16 inHg) VKM pump -85 kPa (-25.1 inHg)
Max. flow rate	: VKX pump 23 NL/min (0.81 scfm) VKM pump 26 NL/min (0.91 scfm)
Supply air pressure	: 3~6 bar, Max. 7 bar (43.5~87 psi, max 101.5 psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 50~65 dBA

Main Advantages

- High efficiency Mini vacuum pump (Multi-Nozzle type).
- Available of individual control.
- Long life time and Low noise level.
- Easy to install and Compact size (10mm).
- Lightweight.
- Built-in check valve.
- Integrated Vacuum Pump, Air supply & vacuum release control valve, Vacuum Switch & Filter, Blowing flow control valve and silencer in a body.

Order No.

Mega Keyboard Pump

Max. vacuum level : VKX pump **-92 kPa** (-27.16 inHg)
 VKM pump **-85 kPa** (-25.1 inHg)
Max. flow rate : VKX pump **109 NL/min** (3.85 scfm)
 VKM pump **135 NL/min** (4.76 scfm)
Supply air pressure : **3~6bar, max 7bar**
 (43.5~87 psi, max 101.5psi)
Supply air type : Dry compressed air
Working temperature : -20°C to +80°C
Noise level : 50~65 dBA

Main Advantages

- High efficiency Mega vacuum pump (Multi-Nozzle type).
- Available of individual control.
- Vacuum filter self cleaning system.
- Long life time and Low noise level.
- Easy to install and Compact size (17mm).
- Lightweight. • Built-in check valve.
- Integrated Vacuum Pump, Air supply & vacuum release control valve, Vacuum Switch & Filter, Blowing flow control valve and silencer in a body.

Order No.

MINI PUMPS

M-Mini Pump

Max. vacuum level	: -85 kPa (-25.1 inHg)
Max. flow rate	: 220 NL/min (7.77 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, Max 101.5 psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 50~68 dBA

Main Advantages

These M-Mini range pumps are compact and low weight design. Although they are the smallest of the VTM range they still use a Multi Stage Ejector principal for generating the vacuum, these pumps provide large capacity vacuum flow combined with high grade plastic, making the pumps resilient to most hazardous vapors. Because the pumps are too small they can be mounted locally to the vacuum requirement, even directly onto the back of suction cups if required. Different vacuum port sizes are available with options for an integrally mounted exhaust or a 3/8" detachable versions. The pumps can be specified with a vacuum switch or a quick release module attached directly onto the pump. The pump can have seal materials options of Viton® & EPDM for corrosive and acidic applications.

X - Mini Pump

Max. vacuum level	: -92 kPa (-27.17 inHg)
Max. flow rate	: 185 NL/min (6.53 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C to +80°C
Noise level	: 50~68 dBA

Main Advantages

These X-Mini range pumps are a compact and low weight design. Although they are the smallest of the VTX range they still use a Multi Stage Ejector principal for generating the vacuum. The X-Mini has the same external dimensions to that of the M-Mini, however the internal ejector system is different to enable higher levels of vacuum to be achieved. The X-Mini is a pump that bridges the gap between the High Flow VTM range and the High Vacuum VTH Range, giving a balance of the two. The housings are made from high grade plastic, making the pumps resilient to most hazardous vapours. Because the pumps are so small they can be mounted locally to the vacuum requirement, even directly onto the back of suction cups if required. Different vacuum port sizes are available with options for an integrally mounted exhaust or a 3/8" detachable versions. The pumps can be specified with a vacuum switch or a vacuum quick release module attached directly onto the pump. The pump can have seal materials options of Viton® & EPDM for corrosive and acidic applications.

One-Line Pump

Max. vacuum level : VTOX pump -92 kPa (-27.17 inHg)
 VTOM pump -85 kPa (-25.1 inHg)

Max. flow rate : VTOX pump 32 NI/min x N Stack (1.13 scfm x N stack)
 VTOM pump 35 NI/min x N Stack (1.23 scfm x N stack)

Supply air pressure : 4~6bar, max 7bar
 (58~87 psi, max 101.5psi)

Supply air type : Dry compressed air

Working temperature : -20°C ~ 80°C

Noise level : 50~65 dBA

This oneline model uses individual pumps to make up the complete unit, each pump is in itself a multi stage ejector unit. Each individual pump can be stacked to together thus creating a modular manifold based system. The advantages of this unit is that it can be operated using just two control valve (as to vacuum and equal vacuum release time to each vacuum pads) whilst retaining individual vacuum lines separate to one another, therefore if any leakage or surface deformation occurs and one pad loses its vacuum, it does not effect the vacuum level in the other pads. Also, it can be used vacuum port for purging work filter cleaning function. It will be achieved long life time vacuum filter & pump. Pumps can be stacked up from 4 - 16 unit depending upon requirements. The pumps can have seal material options of Viton® & EPDM for corrosive and acidic applications.

Main Advantages

- Individual vacuum lines
- Filter cleaning function
- Efficiency and economic
- Can be adjust vacuum release flow
- Compact & long life time

Application

- Semiconductor
- Robotic
- Packaging
- Pick & Place System
- Metal Sheet Handling
- Automotive

M-Minimultiple Pump

<i>Max. vacuum level</i>	: -85 kPa (-25.1 inHg)
<i>Max. flow rate</i>	: 35 NL/min x N Stack (1.23 scfm x N stack)
<i>Supply air pressure</i>	: 4-6bar, max 7bar (58-87 psi, max 101.5psi)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ 80°C
<i>Noise level</i>	: 50~65 dBA

Main Advantages

This M-Minimultiple model uses individual pumps to make up the complete unit, each pump is in itself a multi stage ejector unit. Each individual pump can be stacked together thus creating a modular manifold based system.

The advantages of this unit is that it can be operated using just one control valve whilst retaining individual vacuum lines separate to one another, therefore if any leakage or surface deformation occurs and one pad loses its vacuum, it does not effect the vacuum level in the other pads. Pumps can be stacked up from 2 - 16 unit depending upon requirements. The pumps can have seal material options of Viton® & EPDM for corrosive and acidic applications.

X - Minimultiple Pump

Max. vacuum level : -92 kPa (-27.17 inHg)

Max. flow rate : 32 NL/min x N Stack (1.13scfm x N stack)

Supply air pressure : 4~6bar, max 7bar
(58~87 psi, max 101.5psi)

Supply air type : Dry compressed air

Working temperature : -20°C ~ 80°C

Noise level : 55~65 dBA

Main Advantages

This X-Minimultiple pump model uses individual pumps to make up the complete unit, each pump is in itself a multi stage ejector unit. The X-Minimultiple pump has the same external dimensions to that of the M-Minimultiple pump, however the internal ejector system is different to enable higher levels of vacuum to be achieved. The X-Minimultiple pump is a pump that bridges the gap between the High Flow VTM pump range and the High Vacuum VTH Range, giving a balance of the two. Each individual pump can be stacked together thus creating a modular manifold based system.

The advantages of this unit is that it can be operated using just one control valve whilst retaining individual vacuum lines separate to one another, therefore if any leakage or surface deformation occurs and one pad loses its vacuum, it does not effect the vacuum level in the other pads. Pumps can be stacked up from 2-16 units depending upon requirements. The pumps can have seal material options of Viton® & EPDM for corrosive and acidic applications.

M-Midimultiple Pump

<i>Max. vacuum level</i>	: -85 kPa (-25.1 inHg)
<i>Max. flow rate</i>	: 220 NL/min x N Stack (7.77scfm x N stack)
<i>Supply air pressure</i>	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ 80°C
<i>Noise level</i>	: 50~65 dBA

Main Advantages

Basically this pump is similar function with mini multiple stack pump. Each individual pump can be stacked up thus creating a modular manifold based system. The advantages of this unit is that it can be operated with one supply air port and activating individual vacuum pump which mounted on the manifold, as the result if any leakage occurs due to product surface deformation of one vacuum pad, it will not affect the vacuum performance in other vacuum pads. This pump can be stacked up from 2stack to 6stacks, depending on the requirement. This pump has sealing option of VITON® and EPDM for corrosive and acidic application. Also, can be integrated vacuum filters directly on the pumps.

X - Midimultiple Pump

<i>Max. vacuum level</i>	: -92 kPa (-27.17 inHg)
<i>Max. flow rate</i>	: 185 NL/min x N Stack (6.53 scfm x N stack)
<i>Supply air pressure</i>	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ 80°C
<i>Noise level</i>	: 50~65 dBA

Main Advantages

The X-Midimultiple pump has the same external dimension to X-Midimultiple pump. It enabling it to achieve higher vacuum level. Each individual pump can be stacked up thus creating a modular manifold based system. The advantage of this pump is that it has a bigger vacuum port as the applications requiring large vacuum flow and high vacuum level. If any leakage occurs due to product surface deformation of one vacuum pad, it will not affect the vacuum performance in the other pads. This pump can be stacked up from 2 stacks to 6 stacks. Also, can be specified with an air control solenoid valve and with Viton® or EPDM as seal options.

M-Duplex Pump

<i>Max. vacuum level</i>	: -85 kPa (-25.1 inHg)
<i>Max. flow rate</i>	: 390 NL/min (13.77scfm)
<i>Supply air pressure</i>	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ 80°C
<i>Noise level</i>	: 57~65 dBA

Main Advantages

M-Duplex pump is similar to the block type in that it uses the components of the mini type multi stage vacuum pump. The pumps are mounted onto a dual station manifold. This manifold enables compact and simple installation. The manifold can accommodate two VTM30 pumps thus producing a VTM60, which gives high flow rates in a compact format. A vacuum switch can be ordered with the unit which piggy backs one of the pumps again for compact and easy installation. There is an option for mounting the exhausts one either side or both on one end of the manifold. There is also the option of connecting vacuum and air supply connections on either side of the manifold block, vacuum connections are BSP 1/2" X2.

Order No.

X - Duplex Pump

<i>Max. vacuum level</i>	: -92 kPa (-27.17 inHg)
<i>Max. flow rate</i>	: 332 NL/min (11.72 scfm)
<i>Supply air pressure</i>	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ 80°C
<i>Noise level</i>	: 57~65 dBA

Main Advantages

The Duplex VTX type is similar to the mini block type in that it uses the components of the mini type multi stage vacuum pump. The X-Duplex has the same external dimensions to that of the M-Duplex, however the internal ejector system is different to enable higher levels of vacuum to be achieved. The pumps are mounted onto a dual station manifold.

This manifold enables compact and simple installation. The manifold can accommodate two VTX30 pumps thus producing a X-Duplex 60, which gives higher flow rates in a compact format. A vacuum switch can be ordered with the unit which piggy backs one of the pumps again for compact and easy installation. There is an option for mounting the exhausts one either side, or both on one end of the manifold. There is also the option of connecting.

Conveying Pump (Air Movers)

VTRA Pump

Max. vacuum level : -84.4 kPa (-24.92 inHg)

Max. flow rate : 3396 Nl/m (119.9 scfm)

Supply air pressure : 4~6bar, max 7bar
(58~87 psi, max 101.5psi)

Supply air type : Dry compressed air

Main Advantages

This is a series of adjustable flow rate single stage vacuum pumps particularly good for use in high contamination areas where dust and small debris is likely to enter the vacuum line. The design of this pump enables particles and small debris to pass directly through the pump. High flow rates can be achieved in conjunction with vacuum levels down to -84.4Kpa whilst maintaining a high performance to air consumption ratio.

VTRF Pump

Max. vacuum level : -33.8 kPa (-9.98 inHg)

Max. flow rate : 4670 Nl/m (164.9 scfm)

Supply air pressure : 4~6bar, max 7bar
(58~87 psi, max 101.5psi)

Supply air type : Dry compressed air

Main Advantages

These pumps provide a reliable and cost effective solution for in line product transfer, particularly for transferring bulk materials, granules, continuous strips and powders. Like the VTRA the pump has a straight through design, hence they are non-clogging and maintenance free. High flows can be achieved with in line bore sizes up to 1 1/2".

Application

- ▶ Unloading vibrator feeders
- ▶ Reloading hoppers with plastic Regrind
- ▶ Transferring of engine valves in grinding operation
- ▶ Chip removal in drilling operation
- ▶ Transfer power detergent and caustic chemicals
- ▶ Convey peanut husks
- ▶ Selvedge removal in trimming operation
- ▶ Mandrel collection system

VACUUM
PUMPS

CLASSIC PUMPS

L-Classic Pump

Max. vacuum level	: -91 kPa (-26.87 inHg)
Max. flow rate	: 1370 NL/min (48.43 scfm)
Supply air pressure	: 3~6bar, max 7bar (43.5~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 50~65 dBA

Main Advantages

This is most significant model base on the multi stage principle. Low compressed air are required for massive evacuation volumes at high vacuum flow and high vacuum level rate. Vtec air saving kit is available in this pump in order to maximum reduce the energy usage. VITON® & EPDM seals can be also stipulated as option.

Order No.

VL-Classic Pump

Max. vacuum level	: -80 kPa (-23.62 inHg)
Max. flow rate	: 2061 NL/min (72.78 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 50~65 dBA

Main Advantages

VL-Classic pumps produces the high flow rate gradually while vacuum level is increasing so it is useful for leakage system. Vtec Air Saving kit is available in this pump in order to maximum reduce the energy usage. VITON® & EPDM seals can be also stipulated as option.

Order No.

M-Classic Pump

Max. vacuum level	: -92 kPa (-27.17 inHg)
Max. flow rate	: 1580 NL/min (55.8 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 50~65 dBA

Main Advantages

This Classic VTM pump is probably the most commonly used multi Stage ejector it is available in a large range of sizes and configurations. Each pump comes complete with an exhaust silencer, gauge and fixing brackets. The body whilst robust is also lightweight. The housings are manufactured from PPS high grade plastic, which means most hazardous vapors, can be accommodated. Pump sizes range from a VTM25 to the high flow VTM200.

All units are available with the option of an air saving kit and non-return valves. Viton® and EPDM seals can also be stipulated as options.

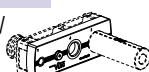

Order No.

X-Classic Pump

Max. vacuum level	: -97 kPa (-28.64 inHg)
Max. flow rate	: 521 NL/min (18.4 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 55 ~ 65 dBA

Main Advantages

This Classic VTX type is a pump that bridges the gap between the High Flow VTM range and the High Vacuum VTH Range, giving a balance of the two. The X-Classic has the same external dimensions to that of the M-Classic, however the internal ejector system is different to enable higher levels of vacuum to be achieved. Each pump comes complete with an exhaust silencer, gauge and fixing brackets. The body whilst robust is also lightweight. The housings are manufactured from PPS high grade plastic, which means most hazardous vapors, can be accommodated. Pump sizes range from a VTX25 to the VTX75. All units are available with the option of an air saving kit and non-return valves. Viton® and EPDM seals can also be stipulated as options.

MM - Midiflex Pump

Max. vacuum level	: -92 kPa (-27.17 inHg)
Max. flow rate	: 2200 NL/min (77.69 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 55 ~ 65 dBA

Main Advantages

This MM-Midiflex pump is a compact manifold based multi stage ejector multi pump arrangement. Much higher flow rates and fast evacuation times can be achieved with this type of pump.

The pump features a pressure gauge and a vacuum gauge along with two G3/4" ports for connecting more than one large bore vacuum pipe. As with most of the other pumps the MM-Midiflex can be specified with an air saving kit, and with Viton® or EPDM as seal options. This manifold has a special design allowing you to choose between two vacuum ports suited for your application. The pumps to achieve a combination of high flow rates and the highest vacuum levels.

MX - Midiflex Pump

Max. vacuum level	: -97 kPa (-28.64 inHg)
Max. flow rate	: 1355 NL/min (47.85 scfm)
Supply air pressure	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 63 ~ 68 dBA

Main Advantages

This MX-Midiflex pump is a compact manifold based multi stage ejector multi pump arrangement. The MX-Midiflex has the same external dimensions to that of the VTMM, however the internal ejector system is different to enable higher levels of vacuum to be achieved. A good balance between higher flow rates and higher vacuum levels with fast evacuation times can be achieved with this type of pump. The pump features a vacuum gauge along with two 3/4" ports for connecting more than one large bore vacuum pipe. As with most of the other pumps the MX-Midiflex can be specified with an air saving kit, and with Viton® or EPDM as seal options.

H - Classic / H - Midiflex Pump

Max. vacuum level : **-100.8 kPa** (-29.76 inHg)

Max. flow rate : **1042 NL/min** (36.8 scfm)

Supply air pressure : **4~6bar, max 7bar**
(58~87 psi, max 101.5psi)

Supply air type : Dry compressed air

Working temperature : -20°C ~ 80°C

Noise level : 60 ~ 65 dBA

Main Advantages

The H-Classic / H-Midiflex range produces the very highest vacuum levels, whilst maintaining good flow rates for quick evacuation time. There are three models to choose from two classic sharp pumps and one midiflex pump, ranging from VTH50 to the VTH300. As with most of the other pumps there are options for an air saving kit, integral non return valve and Viton® or EPDM seals.

Order No.

L - Maxflex Pump

Max. vacuum level	: -91 kPa (-26.87 inHg)
Max. flow rate	: 6100 NL/min (215.4 scfm)
Supply air pressure	: 3~6bar, max 7bar (43.5~87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 55 ~ 68 dBA

Main Advantages

This is the most significant model based on the multi stage principle. Low compressed air are required for massive evacuation volumes at high vacuum flow and high vacuum level rate Vtec air saving kit is available in this pump in order to maximize the reduction of energy usage.

The pumps utilize an integrally mounted large bore air supply ON/OFF valve as an option. Viton® & EPDM seals can be also stipulated as an option as well.

Order No.

M - Maxflex Pump

Max. vacuum level	: -92 kPa (-27.17 inHg)
Max. flow rate	: 11000 NL/min (388.5 scfm)
Supply air pressure	: 4-6bar, max 7bar (58-87 psi, max 101.5psi)
Supply air type	: Dry compressed air
Working temperature	: -20°C ~ 80°C
Noise level	: 55 ~ 68 dBA

Main Advantages

This range of M-Maxflex pumps produces the very highest flow rates, as the name denotes all the pumps uses a large bore common vacuum port with port sizes up to 2". This type of pump has many applications but is particularly useful for high leakage systems, porous materials centerising vacuum system and large vacuum circuits.

The pumps are based around a manifold design and utilize an integrally mounted large bore air supply on/off valve as option. The pumps also come with vacuum and air pressure gauges with two options for positioning of the exhausts, mounting brackets are also supplied. Air saving kits and VITON® & EPDM seals options are also available with this pump.

MEGA PUMPS

Mega Pump

<i>Max. vacuum level</i>	: -92 kPa (-27.17 inHg)
<i>Max. flow rate</i>	: 14460 NL/min (510.6 scfm)
<i>Supply air pressure</i>	: 4~6bar, max 7bar (58~87 psi, max 101.5psi)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ +80°C
<i>Noise level</i>	: 68 ~ 76 dBA

Main Advantages

The largest compressed air-driven vacuum pump in the market place, that is comparatively compact and light weight. This pump is mainly used on applications where larger air volume is to be evacuated or to compensate for the leakage flow must remarkable application for this pump will be in conveying system for granules, transferring bulk materials and powder. This unit is complete with vacuum gauge, pressure gauge and mechanical ON/OFF valve as standard. Air saving kit, solenoid valve, non-return valve, and with VITON® or EPDM as seal options.

Order No.

V-GRIP SYSTEM

V-GRIP
SYSTEM

VG-Series

<i>Max. vacuum level</i>	: -74 kPa (-21.85 inHg)
<i>Max. flow rate</i>	: 1,448 NL/min (51.1 scfm)
<i>Supply air pressure</i>	: 4~6 bar, max 7 bar (58~87 psi, max 101.5 psi)
<i>Air consumption</i>	: 416 NL/min (14.6 scfm)
<i>Supply air type</i>	: Dry compressed air
<i>Working temperature</i>	: -20°C ~ + 80°C
<i>Noise level</i>	: 55~65 dBA

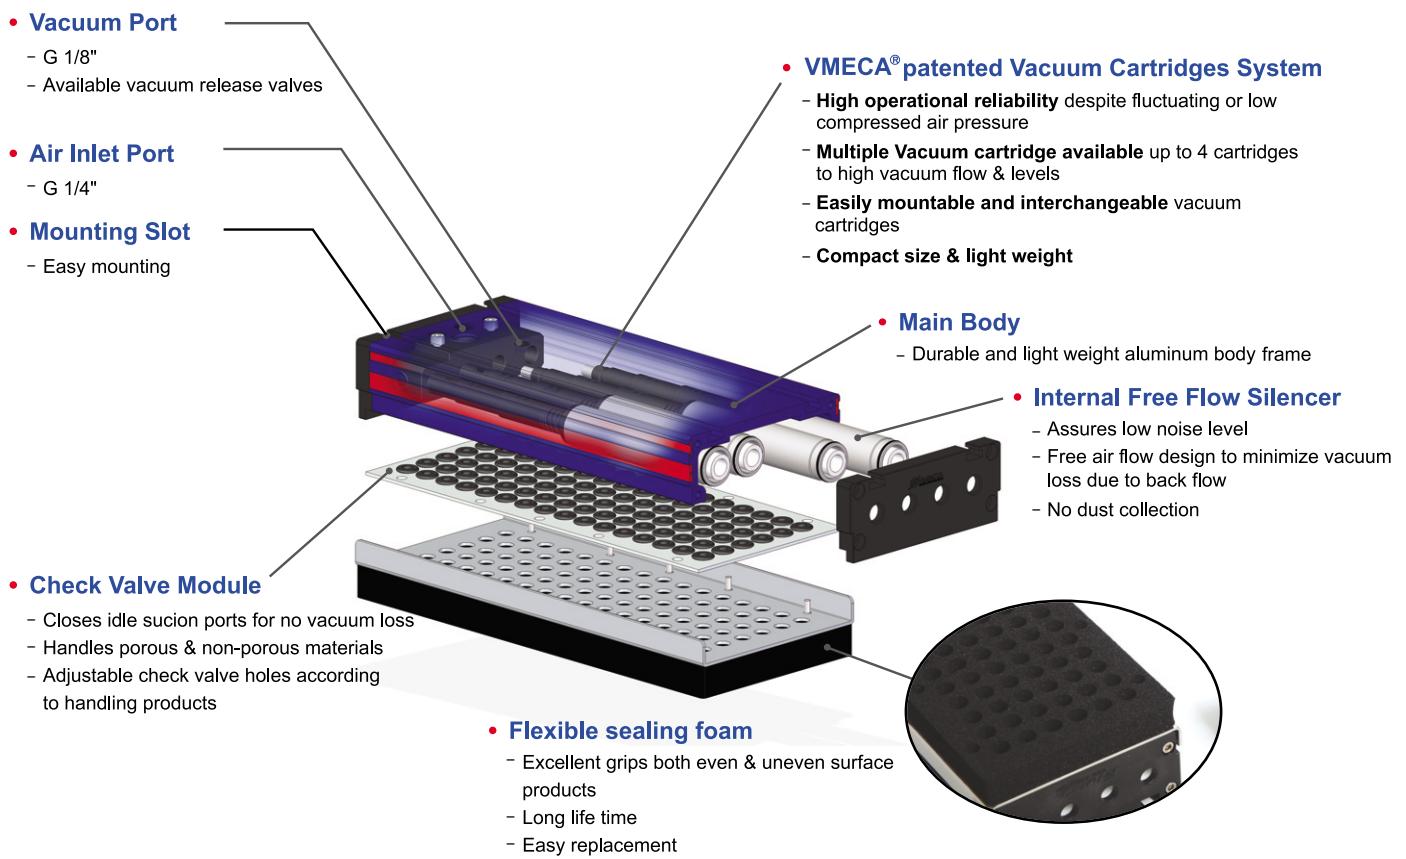

Features

- Modular design gripper system integrated with high efficient multi-stage VMECA Vacuum cartridge^{PT}
- Handles various products with different shapes, sizes and porous materials
- Flexible sealing foam to excellent grip both even & uneven surface products
- Adjustable check valve holes & perfect closure of the idle suction ports
- Durable and light weight aluminum body frame
- Easy installation and low maintenance

Construction of the VG Series

✓ All-around V-Grip system !
✓ Handles various size of products !!

Line Vacuum Filter (LV-filter)

These filters provide a cost effective in line vacuum filtration method. The 6mm push fit version is useful for individual lines particularly with the Oneline pump & Multiple stack pumps.

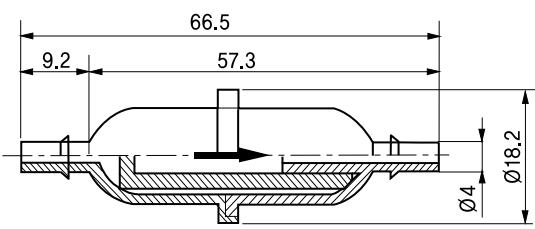

The 3/8" Version can be screwed directly into the Mini type vacuum pump as well as any other port using a 3/8"-BSP connection, when used with the mini pumps & midimultiple pumps it provides a very compact set up.

Bowl Vacuum Filter

These filters are useful in conjunction with the larger pumps which use bigger conjunction parts i.e. 3/8". All filters use a detachable bowl and a replaceable element inside.

The housing of the filter comes complete with a surface mounting bracket, this bracket can be mounted either side of the housing. There are five connection sizes available with each size having the option of a standard length bowl and filter or a long style bowl and filter. Elements for all filters can be ordered separately.

Mega Vacuum Filter

This particular vacuum filter is made by steel Hosing, Clip on Bracket and filter element available in PE material or paper. This enable the element can be blown off with compressed air before replaced. This range of Mega filters are useful in conjunction with the larger pumps need highest filter capacity.

Indicator accuracy			$\leq \pm 2\% F.S. \pm 1$ digit (ambient temperature : 25±3°C)	
Cable			oil-resistance cable (0.15mm)	

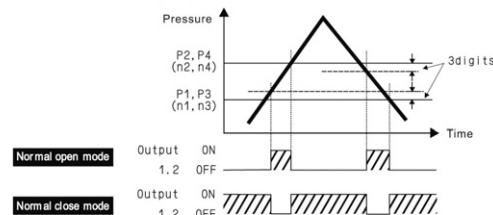

Operating mode

Hysteresis Mode :
Output hysteresis value can be pre-setted.

[Note:] When hysteresis mode setting is within 2 digits, if the input and pre-set pressure is quite near, Pressure Transducer output might cause chattering.

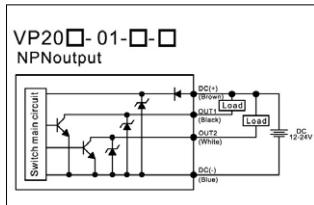

Window comparator mode :
Within pressure setting range, Pressure Transducer output can be ON or OFF.

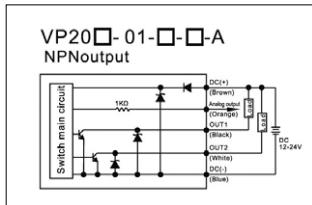

[Note:] Hysteresis is fixed in 3 digits.
Pressure value level setting : At least 6 digits.

Electro-Mechanical Vacuum Switches

Features

These switches use a vacuum actuated membrane to operate a mechanical micro switch. All switches can be wired normally closed or normally open. The vacuum level to which the switch operates can be set with the manually adjustable and lockable screw. The VES-02B comes with two fixing holes molded into the housing, whereas the VES-01B comes with fixings in two extended ears.

Order no.

VES-02B

[Measure Unit : mm]

Operating specifications

Type	VES-01B, VES-02B
Fluid used	Air (non corrosive, inflammable gaseous body)
Output function	NO / NC
Pressure range	10 ~ 90 kPa (29.5 ~ 26.5 inHg)
Hysteresis, kPa	±5
Range of operating temperature (°C)	-10 ~ +80°C
Cable	3 X 0.75mm² X 0.5m
Weight (g)	30
Operating humidity	85% RH or less
Line voltage	MAX. 250V/AC(30V/DC)
Output current Max.	7A
Vacuum connection	Ø6 (Hose out diameter) or M5

Pneumatic vacuum switches

Features

These switches are used to convert a vacuum signal into a pneumatic signal, e.g. for use with an air saving kit. The switch uses a vacuum actuated membrane to operate a pressure Air 3/2 way valve. The level at which the pressure Air valve will operate can be adjusted using the lockable screw. Two options of valve are available a normally closed version or a normally open version.

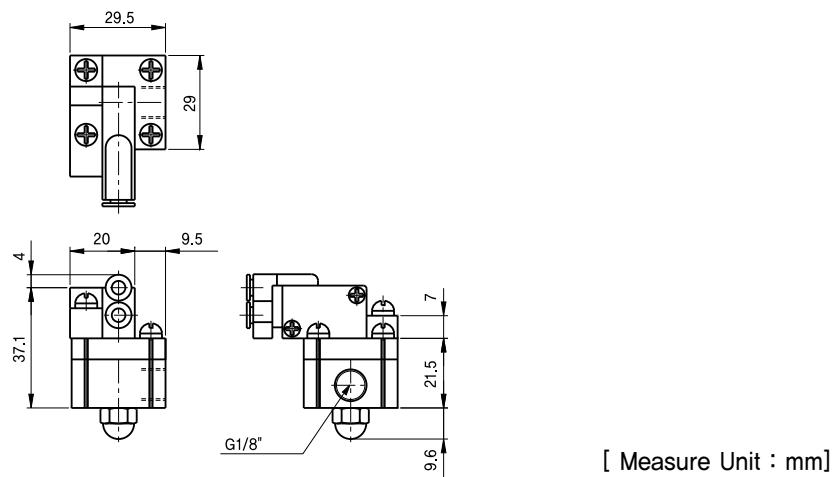

Order no.

Air / Vacuum Manifolds

It's important to maintain pipe bore size on vacuum circuits when using more than one suction cup.

The Vtec manifolds enable multiple connections to be made back to one common large BSP connection. The manifolds are very compact and are available in a number of configurations to suit most applications. Each manifold is manufactured from lightweight anodised aluminum and comes complete with mounting brackets and one end plugged.

Order no.

[Measure Unit : mm]

* Please contact
Vtec for the
dimension.

BUS Cables and Connection Cables for Vacuum Pumps

Order No.

- Bus Cables for '3 in 1' – Vacuum ON/OFF + Vacuum Release ON/OFF + Vacuum Switch

BC M12 - 3DS - 1

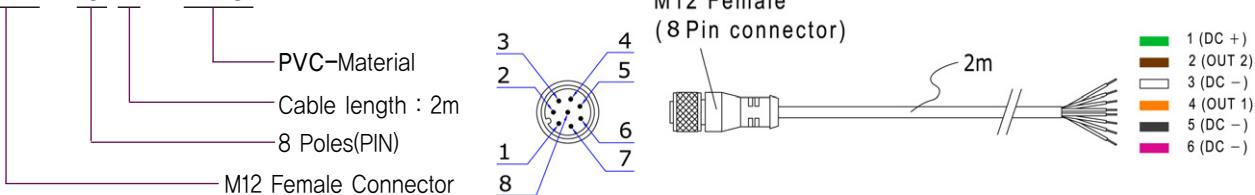

Specifications of DIN 43650-C

Type of contact : Screw with conductor protection	Max. conductor section : 0.75 mm ²
Contact spacing : 8mm	Protection class : IP 65 assembled
Number of poles : 2 Poles	Fixing screw : M2.5 x 28.5
Cable material : PVC H03VVF	Profile gasket : NBR

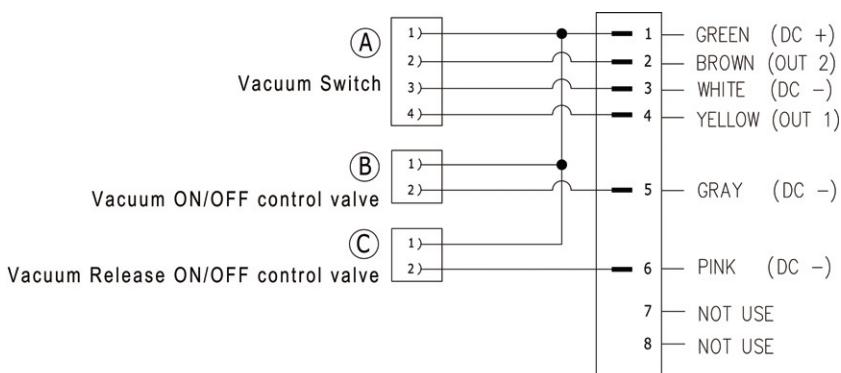

Order No.

- Connection Cables for BC M12..

VC M12 - 8 2 - PVC
